Banner General release notes

Updated: February 19, 2026

Ellucian typically posts release notes the day before it makes the software available to customers. You can review Banner product release dependency information in Ellucian Solution Manager or the Banner Interdependency Matrix attached to Article KB000500135 - Banner Interdependency and Compatibility Matrix in the Ellucian Customer Center.

Support for Banner 8 Self-Service has ended

As of January 1, 2026, Banner 8 Self-Service has moved out of Sustaining Support and has entered End of Support.

For detailed information on support statuses, please review our Support Assurance Policy.

Release documentation

The product documentation available on the Ellucian Documentation site supports the latest available version.

The following table describes where to find additional supporting documentation for the latest and previous versions.

Table 1: Supporting documentation and previous releases

Documentation type	Description	Where to find
Supporting documentation for latest version	Includes files that support the installation or upgrade of this release and the last three major releases.	Click **Attachment** on this page and then select the associated compressed file (.zip) from the displayed list.
Documentation for previous versions	Documentation for earlier releases. This	On the Ellucian Documentation site home page, select Previous

Banner General optional hot fix releases

Updated: February 19, 2026

Optional hot fix releases address the issues listed under the Related Defects and Related Enhancements tabs on the associated release page. This page maintains hot fix links for the current and previous year.

Hot fix release documentation

Content published to the Ellucian Documentation site for a standard Banner release also applies to the hot fix release. For example, to see the documentation related to the Banner General 9.3.25.1 release, go to the Banner General 9.3.25 standard release content on the Ellucian Documentation site.

To find previously released content for a standard release that is no longer available on the Ellucian Documentation site, go to the Previous Versions page, navigate to the appropriate product, and then click the file associated with the version you need in the preferred language. All content is available in English (enus), and some content is available in Spanish (esmx) and French Canadian (frca).

Click a link below to open the Banner product release page in the Ellucian Customer Center.

Release 9.3.37.2 and 8.26.2

Updated: February 19, 2026

The Banner General 9.3.37.2 and 8.26.2 releases contains enhancements and defect resolutions.

Support for Banner 8 Self-Service has ended

As of January 1, 2026, Banner 8 Self-Service has moved out of Sustaining Support and has entered End of Support.

For detailed information on support statuses, please review our Support Assurance Policy.

Population Selection Access Control (GLRPACC) page update

The GLRPACC page currently supports selecting and granting a user edit access to one population selection at a time. Ellucian has enhanced this page to support assigning multiple population selections in a single action, rather than assigning each one individually.

New Tools menu options:

- **Bulk Edit Access**
  This option opens the new **Population Selection - Bulk Edit Access** window. From this window, a user with the BAN_POPSEL_SUPER security object can enter a User ID in the **Assigned User ID** field to whom they want to assign population selections. The user can then do one of the following:
  - Select **Select All** to assign all populations selections to the specified user.
  - Select individual population selections from the list.
- **Single Edit Access**
  Select this option to return to the default **Population Selection - Single Edit Access** window.

For more information and instructions for using this new feature, see Grant edit access to a population selection created by another user and Population Selection Access Control

© 2026 Ellucian Company LLC and its affiliates.

(GLRPACC) page.

This update addresses PE0007588 in the Ellucian Customer Center.

New Banner Business Process API (BPAPI)

New *population-selection-base-description* (v1.0.0) API to support the **Population Selection Definition Rules (GLRSLCT)** administrative page. The BPAPI retrieves, creates, updates, and deletes metadata stored in the GLBSLCT table. This API supports the `GET`, `POST`, `PUT`, and `DELETE` methods.

This update addresses PE0007736 in the Ellucian Customer Center.

Supporting documentation

To download supporting documentation for this release, click **Attachment** on this page and then select the associated compressed file (.zip) from the displayed list. The zip file contains the following files:

- Banner General Release Notes 9.3.37.2 and 8.26.2
- Banner General Use 9.3.37.2 and 8.26.2
- Banner General Configure 9.3.37.1 and 8.26.1
- Banner General Get Started 9.3.37.1 and 8.26.1
- Banner General readme 8.26.2
- Banner General Installation Reference 9.3.37.2
- Banner General Upgrade Guide
- Banner General Resolutions Report 8.26.2

The content published on the Documentation site for this release and the documentation included in the associated zip file (listed above) also support any associated hot fix releases.

© 2026 Ellucian Company LLC and its affiliates.

Database and code updates

Updated: February 19, 2026

Ellucian delivers database and code updates included with the Banner General 8.26.2 release.

Database updates to support GLRPACC page updates

The `gguroptmi_082602.sql` DML script adds the **Bulk Edit Access** option to the GLRPACC page, allowing assignment of multiple population selections to a user in a single operation.

For a complete list of objects delivered with this release, see the Banner General Object List 8.26.2 included in the attached `Banner_General_9.3.37.2_8.26.2.zip` file.

© 2026 Ellucian Company LLC and its affiliates.

Release 9.3.37.1 and 8.26.1

Updated: January 15, 2026

The Banner General 9.3.37.1 and 8.26.1 releases contains enhancements and defect resolutions.

Support for Banner 8 Self-Service has ended

As of January 1, 2026, Banner 8 Self-Service has moved out of Sustaining Support and has entered End of Support.

For detailed information on support statuses, please review our Support Assurance Policy.

Super-user controls for Banner Population Selection

Ellucian introduces new super-user administrative controls for Banner Population Selection. These controls allow authorized administrators to manage population selections regardless of the original Creator.

Security objects and permissions

- BAN_POPSEL_SUPER: A user with this security object has edit access to all population selections regardless of the creator. They can also grant a given user edit access to a population selection that was created by another user (as identified by the **Creator ID**) on the new **Population Selection Access Control (GLRPACC)** page. Use the GSASECR page to assign the BAN_POPSEL_SUPER security object.
- BAN_POPSEL_SUPER delivered with the BAN_DEFAULT_M role.
- Granting edit access to another user does not change the Creator ID of the population selection.
- Creator ID remains immutable to preserve ownership history for tracking and auditing purposes.

New and updated pages

- **Population Selection Access Control (GLRPACC)**

© 2026 Ellucian Company LLC and its affiliates.

A new administrative page that allows super-users to assign edit access privileges to other users.

- Enables a user with the BAN_POPSEL_SUPER security object to assign another user edit access privileges to a selected population selection.
- Only users with the BAN_POPSEL_SUPER security object can edit this page. For all other users, this page is read-only.
- Delivered in the BAN_ADMIN_C class.
- Added to the ***GENPOPSEL** menu.

For more information and instructions for using this page, see Grant edit access to a population selection created by another user and Population Selection Access Control (GLRPACC) page.

- **Population Selection Definition Rules (GLRSLCT)**
  This page has been updated with new fields and an informational message:
  - **Activity Date** and **Activity User** fields added to the page footer, showing the last update timestamp and the user ID of the person who last updated the record.
  - **Edit Access Granted** display-only check box indicates whether the logged in user has edit access to the selected population selection and appears only if the user has edit access defined on the GLRPACC page.
  - A new Notification Center message displays upon initial page access for users with the BAN_POPSEL_SUPER object:
    ```
    User ID <USER_ID> granted security object
    BAN_POPSEL_SUPER and can update Population Selections
    created by other users
    ```

- **Population Selection Extract Data (GLAEXTR)**
  This page includes a new **Edit Access Granted** display-only check box that indicates whether the logged in user has edit access to the population set.
  After the user enters an application and selection ID for a population selection to which they have been granted edit access on the GLRPACC page, the page displays the check box and the following Notification Center warning message:
  ```
  To modify a given population set, ensure the User ID and
  Creator ID values belong to the Population Selection you are
  intending to change.
  ```
  If you want to update the existing population set, you need to manually update the

© 2026 Ellucian Company LLC and its affiliates.

User ID value to match the **Creator ID** value associated with the population selection.

- **Process Submission Control (GJAPCTL)**
  Logic added to track the user that created the parameter records and submitted the GLOLETTJ and GLBPARMJ batch jobs.

This update addresses PE0007343 in the Ellucian Customer Center.

New Banner Business Process API (BPAPI)

New *fips-code-validation* (v1.0.0) API to support the **FIPS Code Validation (GTVFIPS)** administrative page. This API supports the `GET`, `POST`, and `PUT` methods:

This update addresses PE0007675 in the Ellucian Customer Center.

Accessibility Improvements

Improvements made to the following pages to enhance usability and accessibility for all users, ensuring compliance with WCAG 2.1 AA / 2.2 AA guidelines. The page version has been updated to 9.3.37.1 to reflect these improvements.

- **Activity Set-up (GKAPACT)**
- **Process Tree Execution (GKAPEXE)**
- **Process Rules Roles (GKAPRRO)**

This update addresses PE0007448 in the Ellucian Customer Center.

Supporting documentation

To download supporting documentation for this release, click **Attachment** on this page and then select the associated compressed file (.zip) from the displayed list. The zip file contains the following files:

- Banner General Release Notes 9.3.37.1 and 8.26.1
- Banner General Use 9.3.37.1 and 8.26.1
- Banner General Configure 9.3.37.1 and 8.26.1
- Banner General Get Started 9.3.37.1 and 8.26.1

© 2026 Ellucian Company LLC and its affiliates.

- Banner General readme 8.26.1
- Banner General Installation Reference 9.3.37.1
- Banner General Object List 8.26.1
- Banner General Upgrade Guide
- Banner General Resolutions Report 8.26.1

The content published on the Documentation site for this release and the documentation included in the associated zip file (listed above) also support any associated hot fix releases.

Database and code updates

Updated: January 15, 2026

Ellucian delivers database and code updates included with the Banner General 8.26.1 release.

Database updates to support super-user controls for Banner Population Selection

DML for new BAN_POPSEL_SUPER security object

- `gguraobji_082601.sql`
- `ggurownri_082601.sql`

Banner Payment Center Interface release notes

Updated: October 16, 2025

Ellucian typically posts release notes the day before it makes the software available to customers. You can review Banner product release dependency information in Ellucian Solution Manager or the Banner Interdependency Matrix attached to Article KB000500135 - Banner Interdependency and Compatibility Matrix in the Ellucian Customer Center.

Release documentation

The product documentation available on the Ellucian Documentation site supports the latest available version.

Supporting documentation includes files that support the installation or upgrade of this release and the last three major releases.To access the supporting documentation, click **Attachment** on this page and then select the associated compressed file (.zip) from the displayed list.

Information about optional hot fix releases

For information about issues addressed in optional hot fix releases, access the release page for a release in the Ellucian Customer Center and view the Related Defects and Related Enhancements tabs. See Banner General optional hot fix releases to find a link to the release page for a hot fix release.

If you cannot find a release that you expect to see here, you can search for a specific product release on the Banner Product Releases page in the Ellucian Customer Center.

Release 9.1.1

Updated: October 16, 2025

The Banner Payment Center Interface (PCI) 9.1.1 release addresses Common Vulnerabilities and Exposures (CVE).

© 2026 Ellucian Company LLC and its affiliates.

Release 9.1.1 Common Vulnerabilities and Exposures (CVE)

Banner Payment Center Interface (PCI) 9.1.1 addresses some common vulnerabilities and exposures. You can find more information about the CVEs under the **Related Defects** tab on the PAYMENT CENTER INTERFACE 9.1.1 release page in the Ellucian Customer Center.

Tip: For information about how to set up and use Banner payment processing, see Payment Processor Connection Handbook supplement.

Supporting documentation

To download supporting documentation for this release, click **Attachment** on this page and then select the associated compressed file (.zip) from the displayed list. The zip file contains the following files:

- Banner PCI 9.1.1 Resolutions Report
- Banner PCI 9.1.1 README

Release 9.1

Updated: June 20, 2025

Ellucian introduces the release of Banner Payment Center Interface (PCI) 9.1.

The Banner Payment Center Interface (PCI) 9.1 release provides the following enhancement and updates.

Spring Library 6.2.2

Banner Admin Common supports Spring Library 6.2.2.

This enhancement addresses PE0006317 in the Ellucian Customer Center.

Release 9.1 Common Vulnerabilities and Exposures (CVE)

Banner Payment Center Interface (PCI) 9.1 addresses some common vulnerabilities and exposures. You can find more information about the CVEs under the **Related Defects** tab on the PAYMENT CENTER INTERFACE 9.1 release page in the Ellucian Customer Center.

© 2026 Ellucian Company LLC and its affiliates.

Tip: For information about how to set up and use Banner payment processing, see Payment Processor Connection Handbook supplement.

Supporting documentation

To download supporting documentation for this release, click **Attachment** on this page and then select the associated compressed file (.zip) from the displayed list. The zip file contains the following files:

- Banner PCI 9.1 Resolutions Report
- Banner PCI 9.1 README

Release 9.0.1

Updated: April 17, 2025

Ellucian introduces the release of Banner Payment Center Interface (PCI) 9.0.1.

The Banner Payment Center Interface (PCI) 9.0.1 release provides the following updates.

Release 9.0.1 Common Vulnerabilities and Exposures (CVE)

Banner Payment Center Interface (PCI) 9.0.1 addresses some common vulnerabilities and exposures. You can find more information about the CVEs under the **Related Defects** tab on the PAYMENT CENTER INTERFACE 9.0.1 release page in the Ellucian Customer Center.

Tip: For information about how to set up and use Banner payment processing, see Payment Processor Connection Handbook supplement.

© 2026 Ellucian Company LLC and its affiliates.

Release 9.0

Updated: December 12, 2024

Ellucian introduces the release of Banner Payment Center Interface (PCI) 9.0.

The Banner Payment Center Interface (PCI) 9.0 release provides the following enhancements and updates:

- This release includes important technical currency performance enhancements:
    - Spring 6.1.12 library is supported.
    - Tomcat 10.1.x is supported.
    - Java 17 (JDK 17) and Java 21 (JDK 21) are supported.
    - WebLogic (which currently does not support Java 17 or Java 21) is no longer supported.
- The PCI API that was previously delivered in a `pci.war` file as part of the Banner General release is now delivered with the PCI 9.0 release.
- The `ojdbc11.jar` must be present within the `tomcat/lib` folder.
- This release also includes CVE and defect updates and corrections.

For information about the CVE fixes and defect fixes, refer to the resolutions report and view the release record PAYMENT CENTER INTERFACE 9.0.

For information about how to set up and use Banner payment processing, see Payment Processor Connection Handbook supplement.

Supporting documentation

- Banner PCI 9.0 README

© 2026 Ellucian Company LLC and its affiliates.

2025 Releases

Updated: December 12, 2024

Release 9.3.37 and 8.26

Updated: December 11, 2025

The Banner General 9.3.37 and 8.26 releases contain enhancements, defect resolutions, and technical currency updates. The 8.26 release is a cumulative release of all interim releases and patches delivered after the 8.25 release.

Banner 8 Self-Service sustaining support

To support institutions in the final stages of their transition off Banner 8 Self-Service, Ellucian will amend the Support Assurance Policy to provide limited support for Banner 8 Self-Service during the sustaining support phase, October 1 through December 31, 2025. During this time, support will be limited to addressing critical vulnerabilities only. This limited extension is intended to help institutions finalize their transition off Banner 8 Self-Service.

This additional support does NOT include:

- Regulatory updates
- Other security issues not classified as critical vulnerabilities
- Functional defect fixes

If you have not yet transitioned off Banner 8 Self-Service, Ellucian strongly encourages you to contact your Customer Success Manager to finalize your plans, as help and resources are available.

For detailed information on support statuses, please review our Support Assurance Policy.

© 2026 Ellucian Company LLC and its affiliates.

Changed GOANPID page

The GOANPID page screen key generation includes an enhancement to append X for the Null fields in the Unique Key Generation feature across all the reports.

This enhancement addresses PE0007235 in the Ellucian Customer Center.

GSAAPRO access for non-BANSECR accounts

Previously, only BANSECR users were allowed to execute functions on the **Banner Unified Audit Rules (GSAAPRO)** page. Ellucian introduces the following new roles to enable non-BANSECR (distributed security) accounts to access GSAAPRO functionality, provided the user has granted access to the page.

- BAN_DEFAULT_GSAAPRO_Q: Query access role. Assign this role to users that only need access to the status report.
- BAN_DEFAULT_GSAAPRO_M: Maintenance access role. Includes query access in addition to update, insert, and delete permissions. Assign this role to users that require full maintenance access to GSAAPRO

This update addresses PE0006646 in the Ellucian Customer Center.

OAuth credential management for Person Manager Address Verification Service (AVS)

Banner now uses Ellucian's standard OAuth credentials to securely and efficiently communicate with the Person Manager Address Verification Service (AVS), aligning with best practices.

Key updates include:

- Replaced manual OAuth credential entries with standard keys, `banner.oauth.clientId` and `banner.oauth.clientSecret`, located under the GLOBAL application on the **Banner Applications Configurations (GUACONF)** page.
- Support for Multi-Entity Processing (MEP), allowing separate configurations such as `NORTH.banner.oauth.clientId` and `SOUTH.banner.oauth.clientId`
- AVS now automatically retrieves the tenant ID from the OAuth token at runtime, removing the need for manual configuration.

© 2026 Ellucian Company LLC and its affiliates.

- Removed deprecated legacy configurations from the PERS_MGR application on the **Banner Applications Configurations (GUACONF)** page.
    - `address.verify.integration.person.manager.tenantId`
    - `address.verify.integration.person.manager.clientId`
    - `address.verify.integration.person.manager.secret`

This update addresses PE0006852 in the Ellucian Customer Center.

Enhanced jobsub-statuses API

This update enhances the *jobsub-statuses* API to improve the Banner batch job submission and status capture process. This enhancement will provide comprehensive status and timing information to support troubleshooting and improve system integration.

The *jobsub-statuses* API now captures the following statuses for all batch jobs launched from Banner:

- C - Completed
- Q - In Queue
- R - Submitted to run

Only batch C jobs, or those jobs that have been updated to support the exit status capture will report the following job statuses:

- 0 - Completes, Success
- 1 - Completed, Failure

The API returns the statuses listed above, but instead of reporting 0 and 1, it will report them as S and F.

The *jobsub-statuses* API includes the following new timestamp properties:

- `queueDate` - timestamp when job entered the queue
- `runDate` - timestamp when the job listener launched the job
- `completionDate` - timestamp when job completed

© 2026 Ellucian Company LLC and its affiliates.

A new configuration setting, `jobsub_status_debug_logging`, is available for the General application on the **Banner Applications Configurations (GUACONF)** page. When enabled, this option activates detailed debug logging for the job submission status process, to provide enhanced troubleshooting and monitoring capabilities. This option is disabled by default.

Note: Debug logs generated by this feature are stored in the GURDBUG table and require direct database access to review. If you require debugging support, contact Ellucian Action Line.

This update addresses PE0006909 in the Ellucian Customer Center.

Preferred middle and last name display

Banner introduces support to manage and display a person's preferred middle and last name in Banner Self-Service applications.

Note: This release does not support preferred middle and last name searches. Ellucian will deliver search functionality with a future release.

Key enhancements:

- **Name Display Rules (GUANDSP)** page includes new optional fields:
    - **Preferred Middle Name**
    - **Preferred Middle Name Length**
    - **Preferred Last Name**
    - **Preferred Last Name Length**

  Review the existing name usage rules on the **Name Display Rules (GUANDSP)** administrative page to ensure proper name display format.
- **General Person Identification (SPAIDEN)** page includes new optional fields:
    - **Preferred Middle Name**
    - **Preferred Last Name**

  Preferred middle and last name support currently only applies to SPAIDEN.

  Note: Other *IDEN pages will be updated in future product releases.
- *general-person-identification-current-identification* BAPI includes two new properties

© 2026 Ellucian Company LLC and its affiliates.

to support the new fields on the SPAIDEN page:

  - `persPrefMname`
  - `persPrefLname`

- New configuration options
  The GENERAL_SS application introduces new configurations to control the visibility and editability of the new fields on the **Personal Information** page in Banner General Self-Service. By default, these fields are hidden (value = 0).

  - `personalInfo.personalDetail.preferredMiddleName`
  - `personalInfo.personalDetail.preferredLastName`

- Renamed configuration
  Ellucian renamed the existing `personalInfo.personalDetail.preferredName` to `personalInfo.personalDetail.preferredfirstName` to maintain naming consistency with other preferred name configurations. This change does not affect existing data.

For more information about this enhancement in Banner General Self-Service see Preferred middle and last name display in the *Banner General Self-Service 9.24 Release Notes*.

This update addresses PE0006958 in the Ellucian Customer Center.

Enable auditing the GOBTPAC table for Banner Unified Auditing

To enhance security and traceability, auditing has been enabled for the GOBTPAC table. This update supports monitoring of PIN status changes when the `GOBTPAC_PIN_DISABLED_IND` is set to Y. A new GOBTPAC rule is available for the BASELINE_PROFILE on the GSAAPRO page. This rule is active by default.

This update addresses PE0007051 in the Ellucian Customer Center.

Updated BPAPIs

This release includes the following BPAPI enhancements.

© 2026 Ellucian Company LLC and its affiliates.

BPAPI	Update
email-address v1.0.0	Now supports DELETE method
immunization-information v1.0.0	Enhanced POST and PUT methods
international-information-nationality v0.1.0	Now supports DELETE method
international-information-visa v0.1.0	• Now supports DELETE method • Enhanced GET and PUT methods
international-information-visa-documents v0.1.0	• Now supports DELETE method • Enhanced GET, POST, and PUT methods

This update addresses PE0007071 in the Ellucian Customer Center.

Updated pages

- **Visa International Information (GOAINTL)**
  - Changed the **Sequence Number** field data type to a TextItem to enable search functionality.
  - The **Nation of Issue** field is now a required field when a value is entered in the **Passport ID** field. If the **Passport ID** field is empty, the **Nation of Issue** field is not required.
- **Immunization Information (GOAIMNU)**
  Ellucian modified this page so that the *immunization-information* API no longer runs the query after saving in headless mode. This prevents the query from running when the API is called programmatically (outside of the user interface).

This update addresses PE0007071 in the Ellucian Customer Center.

County code support for Person Manager Address Verification Service (AVS)

This enhancement applies only to institutions that use Person Manager Address Verification Service (AVS).

© 2026 Ellucian Company LLC and its affiliates.

Banner now supports Federal Information Processing Standards (FIPS) codes returned by the Address Verification Service (AVS). FIPS codes are standardized 5-digit codes that identify U.S. counties.

Ellucian introduces new and updated pages that enable institutions to map their county codes to the standard FIPS codes in Banner using the STVCNTY page.

Mapping county codes to FIPS codes is not required if either of the following conditions apply:

- The institution already uses the FIPS code for the county code
- The institution does not use Person Manager AVS

When you enter or update an address in Banner and a FIPS code value is present on STVCNTY, AVS returns the county value and verifies the address. If no FIPS code is present, AVS still verifies the address but displays an informational message indicating the missing FIPS code.

Key Enhancements

- **FIPS Code Validation (GTVFIPS)**
    - New validation page populated with all available 5-digit county-level FIPS codes
    - Administrators can add or edit FIPS codes and descriptions
    - Assigned the BAN_DEFAULT_M role
    - Fields:
        - **Code** – 5-digit county-level FIPS code
        - **Description** – County and state name
    - Banner stores FIPS codes in the new GTVFIPS table.
- **County Code Validation (STVCNTY)**
    - Includes a new **FIPS Code** column that allows you to map county codes to corresponding FIPS codes using the **Lookup** ••• button to select values from GTVFIPS.
      You may also enter a FIPS code directly as the county code value.

© 2026 Ellucian Company LLC and its affiliates.

    - Each FIPS code must map to only one county code.

- Updated *county-codes* Business Process API (BPAPI)
    - Introduces the new `fipsCode` property to support mapping county codes to FIPS Codes on STVCNTY
    - Delivered with Banner Business Process API 9.41

This update addresses PE0007132 in the Ellucian Customer Center

Chilean RUT support

This release adds support for Chilean RUT (Rol Único Tributario) identification numbers on the **Common Matching Entry (GOAMTCH)** page, enabling institutions in Chile to use their national tax ID system.

- The GOAMTCH page now supports RUT format when enabled on the **Banner Applications Configurations (GUACONF)** page.
- Field labels on GOAMTCH automatically change from **SSN** to **RUT** when enabled.
- ID field extended to accommodate 10-character RUT numbers

When you enable RUT functionality the system uses the RUT number instead of the system-generated Banner ID when creating a person or organization record. You can also define a matching rule to validate the RUT during record creation.

This enhancement addresses PE0007155 in the Ellucian Customer Center.

Accessibility Improvements

Improvements made to enhance usability and accessibility for all users, ensuring compliance with WCAG guidelines. The page version has been updated to 9.3.37 to reflect these improvements.

This update addresses PE0007330 in the Ellucian Customer Center

The content published on the Documentation site for this release and the documentation included in the associated zip file (listed above) also support any associated hot fix releases.

Database and code updates

Updated: December 11, 2025

Ellucian delivers database and code updates included with the Banner General 8.26 release.

Database updates to support Address Verification Service (AVS) OAuth credentials

The `gurocfgd_082600.sql` script removes the following deprecated Person Manager Address Verification Service configurations from the GUROCFG table for Application ID PERS_MGR:

- `address.verify.integration.person.manager.tenantId`
- `address.verify.integration.person.manager.clientId`
- `address.verify.integration.person.manager.secret`

This update addresses PE0006852 in the Ellucian Customer Center.

© 2026 Ellucian Company LLC and its affiliates.

Database updates to support preferred middle and last names

Ellucian delivers the following new table columns and stored procedures to support the display of preferred middle and last names in Banner Self-Service applications.

Scripts	Details
DDL • gurndsp_082600_01.sql • gurndsp_082600_02.sql • gurndsp_082600_03.sql • gurndsp_082600_04.sql • gurndsp_082600_05.sql	Table: GURNDSP Four new columns: • `GURNDSP_PREF_MNAME_SEQ` • `GURNDSP_PREF_MNAME_LEN` • `GURNDSP_PREF_LNAME_SEQ` • `GURNDSP_PREF_LNAME_LEN`
DDL • spbpers_082600_01.sql • spbpers_082600_02.sql • spbpers_082600_03.sql	Table: SPBPERS Two new columns: • `SPBPERS_PREF_MIDDLE_NAME` • `SPBPERS_PREF_LAST_NAME`
DBPROCS • gokb_bio_r0.sql • gokb_bio_r1.sql • gokb_bio1.sql • gokd_spbpers1.sql • gokname0.sql • gokname1.sql	Stored Procedures Added functions: • `p_create3` • `p_update3` • `p_validate2`

This update addresses PE0006958 in the Ellucian Customer Center.

© 2026 Ellucian Company LLC and its affiliates.

Database update to support GSAAPRO access for non-BANSECR accounts

The `ban_default_gsaapro_roles_082600.sql` script creates the new roles and grants the appropriate permissions to each role.

This update addresses PE0006646 in the Ellucian Customer Center.

Database update to support jobsub-statuses API

Ellucian delivers the following new objects to support the improvements made to the *jobsub-statuses* API.

Scripts	Details
DML • ggubappli_082600.sql • ggurocfgi_082600.sql	Table: GUBAPPL Inserts a record into the `gubappl` table to register the Banner Generalapplication. TABLE: GUROCFG Inserts new configuration parameter `jobsub_status_debug_logging` to the table for the General application with a default value of N.
DBPROCS • gb_jobsub0.sql • gb_jobsub1.sql • gokb_advq_util1.sql • gt_gjbrslt_before_insert.sql	• New GB_JOBSUB package to provide comprehensive status tracking for Banner batch job submissions throughout their lifecycle • Added automatic status tracking for batch jobs submitted through Banner Advanced Queue (AQ) infrastructure. When jobs are enqueued to the GURJOBS_Q queue, the procedure now extracts job information from the message payload and automatically records the queue status (`Q`) in the

© 2026 Ellucian Company LLC and its affiliates.

Scripts	Details
	GJBRSLT table through the new `gb_jobsub.p_create_q_status` procedure • New trigger on the GJBRSLT table preserves critical job timing data when batch processes update their status records.
Java gurjbif.jar	Recompiled to include changes to `JobSubStatus.java` class
gurjobs.pc	• Records `R` (Running/Submission) status to GJBRSLT table immediately before job execution • New method `create_gjbrslt_status()` captures job status through `gb_jobsub.p_create_r_status` procedure • Improves job tracking and monitoring capabilities
MISC • gjajobs.shl • gjajsub.pl • gjbrslt.pl • gjbrslt.shl • glolettj.pl • glolettj.shl	Updates to support batch completion status capture for all batch types.

© 2026 Ellucian Company LLC and its affiliates.

Scripts	Details
• sctban.pm	

This update addresses PE0006909 in the Ellucian Customer Center.

Database updates to support GOBTPAC auditing

Ellucian delivers DML to support auditing the GOBTPAC table.

The following scripts insert and activate the new GOBTPAC audit rule in the GURAUDR table.

- `gguraudri_082600.sql`
- `gguraudru_082600.sql`

This update addresses PE0007051 in the Ellucian Customer Center.

New database scripts to support Banner Event Publisher (BEP)

- `guraobji_082600.sql` – Inserts new BAN_BYPASS_SYNC_EVENTS security object. Grant this object to a user to allow properly configured Banner Event Publisher (BEP) events to ignore changes made by that user.
- `govsync.sql` – Creates new generic view that provides additional data elements used by BEP events.

This update addresses PE0007071 in the Ellucian Customer Center.

Database updates to support county codes

The following scripts create the new GTVFIPS table and update the STVCNTY table to support mapping county codes to the 5-digit Federal Information Processing Standards (FIPS) codes.

Script	Details
DDL	Creates new table: GTVFIPS Columns:

© 2026 Ellucian Company LLC and its affiliates.

Script	Details
• gtvfips_082600_01.sql • gtvfips_082600_02.sql • gtvfips_082600_03.sql • gtvfips_082600_04.sql • gtvfips_082600_05.sql • gtvfips_082600_06.sql	• `GTVFIPS_CODE` • `GTVFIPS_DESC`
DDL • stvcnty_082600_01.sql • stvcnty_082600_02.sql • stvcnty_082600_03.sql	Table: STVCNTY New column: `STVCNTY_FIPS_CODE`
DML • gtvfipsi_082600.sql • ggubobjsi_082600.sql • ggubpagei_082600.sql • gguraobji_082600.sql • ggurmenui_082600.sql • gguruobji_082600.sql	• Inserts FIPS codes for all U.S. counties • Object registration • Page registration • Security object registration • Menu integration • Role assignment
Trigger gtvfips_surrogate_id.sql	• Generates unique `gtvfips_surrogate_id` • Sets `gtv_fips_version` to 0 and increments it on update.

This update addresses PE0007132 in the Ellucian Customer Center

Release 9.3.36.2 and 8.25.2

Updated: November 20, 2025

The Banner General 9.3.36.2 and 8.25.2 releases contains enhancements and defect resolutions.

Banner 8 Self-Service is in sustaining support

As of October 1, 2025, Banner 8 Self-Service has moved out of Maintenance Support and entered Sustaining Support through December 31, 2025.

During this time, Ellucian will provide support only for critical vulnerabilities.

Sustaining support does NOT include:

- Regulatory updates
- Other security issues not classified as critical vulnerabilities
- Functional defect fixes

This sustaining support period is intended only to help institutions complete their transition off Banner 8 Self-Service. On January 1, 2026, Banner 8 Self-Service will reach End of Support.

If your institution has not yet transitioned, Ellucian strongly urges you to finalize your plans now. Your Customer Success Manager can connect you with resources and support to ensure a successful move.

For detailed information on support statuses, please review our Support Assurance Policy.

Changed GOANPID page

The GOANPID page delivers the following enhancements for this release.

- The **UKVI** window is new to the **Program Report Type** window.
- The **Course Reference** section is new to the **HESA** window of the **Program report type** window.

© 2026 Ellucian Company LLC and its affiliates.

- The following fields are moved from the **Program Management** section to the **UKVI** section of the **Program Report Type** window:
    - ATASREQD - ATAS Required
    - HRSWEEK - Hours per Week
    - PROGMAMDPLACE
    - PLACEHRSWEEK
    - % MANDATORY WORK PL
- A new validation rule is now available to verify the entry of the primary key in each section of the GOANPID page.

For more information about this page, including field descriptions, see General Overall Administration Non-Person Identity (GOANPID) page.

These enhancements address PE0007110 in the Ellucian Customer Center.

Supporting documentation

To download supporting documentation for this release, click **Attachment** on this page and then select the associated compressed file (.zip) from the displayed list. The zip file contains the following files:

- Banner General Release Notes 9.3.36.2 and 8.25.2
- Banner General readme 8.25.2
- Banner General Installation Reference 9.3.36.2
- Banner General Object List 8.25.2
- Banner General Upgrade Guide
- Banner General Resolutions Report 8.25.2
- Banner General Page List 9.3.36.2

The content published on the Documentation site for this release and the documentation included in the associated zip file (listed above) also support any associated hot fix releases.

© 2026 Ellucian Company LLC and its affiliates.

Database and code updates

Updated: November 20, 2025

Ellucian delivers database and code updates included with the Banner General 8.25.2 release.

Note: This information applies to on-premises deployments only.

Support for GOANPID page changes

The following DML delivers seed data for the GORSEID, GORSETP, and GTVSEID tables to support the GOANPID page changes:

- `ggornpidd_082502.sql`
- `ggorseidd_082502.sql`
- `ggorseidi_082502.sql`
- `ggorsetpd_082502.sql`
- `ggorsetpi_082502.sql`
- `ggtvseidd_082502.sql`
- `ggtvseidi_082502.sql`

This update addresses PE0007110 in the Ellucian Customer Center.

Release 9.3.36.1 and 8.25.1

Updated: October 16, 2025

The Banner General 9.3.36.1 and 8.25.1 releases contains enhancements and defect resolutions.

Banner 8 Self-Service is in sustaining support

As of October 1, 2025, Banner 8 Self-Service has moved out of Maintenance

© 2026 Ellucian Company LLC and its affiliates.

Support and entered Sustaining Support through December 31, 2025.

During this time, Ellucian will provide support only for critical vulnerabilities.

Sustaining support does NOT include:

- Regulatory updates
- Other security issues not classified as critical vulnerabilities
- Functional defect fixes

This sustaining support period is intended only to help institutions complete their transition off Banner 8 Self-Service. On January 1, 2026, Banner 8 Self-Service will reach End of Support.

If your institution has not yet transitioned, Ellucian strongly urges you to finalize your plans now. Your Customer Success Manager can connect you with resources and support to ensure a successful move.

For detailed information on support statuses, please review our Support Assurance Policy.

Changed GOANPID page

The GOANPID page delivers the following enhancements for this release.

- The **Copy** and **Copy Term** fields are new to the Key block.
- The following sections are new to the **Program Report Type** window of the GOANPID page:
    - The **Program Rules** section is new to the **Program Management** window
    - The **Masters Unit of Assessment** is new to the **HESA** window
- The **Program SD and ED Rules** window is new. The Program SD and ED Rules report type allows you to enter and view various non-person identity regulatory data associated to the program start date and end date rules report.

For more information about this page, including field descriptions, see General Overall Administration Non-Person Identity (GOANPID) page.

© 2026 Ellucian Company LLC and its affiliates.

These enhancements address PE0006864 in the Ellucian Customer Center.

Changed GUAPSWD page

Removed **Database** display-only field from the **Oracle Password Change (GUAPSWD)** page.

This update addresses PE0006960 in the Ellucian Customer Center.

Supporting documentation

To download supporting documentation for this release, click **Attachment** on this page and then select the associated compressed file (.zip) from the displayed list. The zip file contains the following files:

- Banner General Release Notes 9.3.36.1 and 8.25.1
- Banner General readme 8.25.1
- Banner General Installation Reference 9.3.36.1
- Banner General Object List 8.25.1
- Banner General Upgrade Guide
- Banner General Resolutions Report 8.25.1
- Banner General Page List 9.3.36.1

The content published on the Documentation site for this release and the documentation included in the associated zip file (listed above) also support any associated hot fix releases.

Database and code updates

Updated: October 16, 2025

Ellucian delivers database and code updates included with the Banner General 8.25.1 release.

Note: This information applies to on-premises deployments only.

© 2026 Ellucian Company LLC and its affiliates.

Support for GSAPASR account password change restriction

The ability to change passwords for Ellucian delivered security and system accounts is now restricted on the **Oracle distributed Security Password Reset (GSAPASR)** page delivered with Banner Access Management.

To support this update, the 8.25.1 upgrade includes the DML script `ggurusrpi_082501.sql`, which inserts records into the GURUSRP table for Ellucian delivered security and system accounts that do not permit password changes.

This update addresses PE0006960 in the Ellucian Customer Center.

Linux 9 compiler compatibility and memory safety improvements

As part of the migration to Linux 9, this release includes updates to improve compatibility with GNU Compiler Collection (GCC) version 10 or later and enhance memory safety in PRO*C processes.

- Global variable handling with GCC 10+
  Addresses PRO*C compile failures due to Multiply Defined Global Symbols linker errors.
  Beginning with GCC 10, global variables defined in one source file must be explicitly declared `extern` in other files that reference them.
  With this release, Ellucian added a temporary `-fcommon` compiler flag to the `sctprock.mk` file which restores the pre-GCC 10 behavior and allows multiple definitions of global variables without linker errors.

  Note: This is a temporary flag. Ellucian will remove the flag after all PRO*C processes have been updated to handle global variables and align with GCC 10+ standards.

- Memory safety updates
  Ellucian has modified the `gusmdid.pc` and `gorseve.pc` files to address compiler warnings related to unsafe string operations. For example, `-Wstringop -overflow`.

This update addresses PE0006989 in the Ellucian Customer Center.

Improved Extensibility support in Banner TCC tables

To ensure consistent and valid data handling and prevent data integrity issues associated

© 2026 Ellucian Company LLC and its affiliates.

with Banner Extensibility enhancements, Ellucian added table constraints to TCC tables.

The DML script, `ban_surrogate_id_constraint_082501_01.sql`, ensures that a unique surrogate_id constraint exists for tables in the TXCNMGR schema.

This update addresses PE0006856 in the Ellucian Customer Center.

Release 9.3.36 and 8.25

Updated: September 25, 2025

The Banner General 9.3.36 and 8.25 releases contains enhancements, defect resolutions, and technical currency updates. The 8.25 release is a cumulative release of all interim releases and patches delivered after the 8.24 release.

Banner 8 Self-Service sustaining support

To support institutions in the final stages of their transition off Banner 8 Self-Service, Ellucian will amend the Support Assurance Policy to provide limited support for Banner 8 Self-Service during the sustaining support phase, October 1 through December 31, 2025. During this time, support will be limited to addressing critical vulnerabilities only. This limited extension is intended to help institutions finalize their transition off Banner 8 Self-Service.

This additional support does NOT include:

- Regulatory updates
- Other security issues not classified as critical vulnerabilities
- Functional defect fixes

If you have not yet transitioned off Banner 8 Self-Service, Ellucian strongly encourages you to contact your Customer Success Manager to finalize your plans, as help and resources are available.

For detailed information on support statuses, please review our Support Assurance Policy.

© 2026 Ellucian Company LLC and its affiliates.

Updated translation configuration default value

Ellucian has changed the GLOBAL `batch.jobs.translation.export.env.vars.enabled` configuration default value from N to Y. This update enables the export of the following translation environment variables on the job submission server for all PRO*C processes, when a non en-US locale is selected for the **Jobsubmission Language** field on the **Installation Control Form (GUAINST)** page.

- NLS_LANG
- NLS_DATE_FORMAT
- LC_NUMERIC

Note: If you change the value to N, job submission will use the en-US locale for language, date, and numeric formats.

This update addresses PE0006503 in the Ellucian Customer Center.

Banner batch logging

Ellucian introduces the **Debug Level** drop-down field available in the submission section of the **Process Submission Control (GJAPCTL)** page. This field allows you to set logging levels to troubleshoot and debug issues with Java and batch C processes. This field is visible only to users with the BAN_BATCH_DEBUG security object.

The following **Debug Level** options are available:

- For C processes, DEBUG is the only option.
- For Java processes, options include TRACE, DEBUG, INFO, WARN, ERROR, FATAL, and OFF.

Note: Submitting a batch job with the **Debug Level** option set to DEBUG or TRACE might cause potential system slowdowns due to increased resource utilization.

All debug log files generated during job execution are stored in the same directory as the batch process LOG and LIS output files on the job submission server. The debug LOG files have the format, `job_oneup_debug.log`.

This update addresses PE0006346 in the Ellucian Customer Center.

© 2026 Ellucian Company LLC and its affiliates.

Options Maintenance (GUAOPTM) page update

A new **Baseline Indicator** field is available on the **Options Maintenance (GUAOPTM)** page to support Banner security updates. This field is display-only and identifies Ellucian-delivered baseline records. Only users with privileged security access can modify these records.

This update addresses PE0006456 in the Ellucian Customer Center.

Technical currency updates

The September 2025 Banner General 9.3.36 and 8.25 releases include technical currency changes to improve product quality, upgrade to current releases of third-party software, improve stability, and maintain security standards.

Note: Ellucian strongly recommends customers always operate on actively supported versions.

This update addresses PE0006503 in the Ellucian Customer Center.

Diagnostic message for missing configurations

Ellucian now provides a diagnostic message in the report generated during the activation of a profile on the **Banner Unified Audit Rules (GSAAPRO)** page. This message helps identify any missing required configuration entries delivered by Ellucian in the GUROCFG table.

If a required configuration is missing, the report will display a message in the following format:

```
*ERROR* Missing configuration "%01%" [type string] for the
"%02%" application on GUACONF - %03%
```

For example, `*ERROR* Missing configuration "unifiedAuditing.capture.data.method" [type string] for the "BanAudit" application on GUACONF`

This update addresses PE0006639 in the Ellucian Customer Center.

© 2026 Ellucian Company LLC and its affiliates.

Changed GOANPID page

The GOANPID page delivers the following enhancements for this release.

- The **Unique Key** section now generates the unique key with the combined values that you enter for a specific code and for the report that you select, using the tilde symbol (~).
- The **SEID code** field is renamed to **Code** and the **Text Value** field is renamed to **Value**.
- The PROGRAM ID option is new to the Code column in the **Unique Key Generation** section for Qualification report type.

This update addresses PE0006717 in the Ellucian Customer Center.

Changed Name Type Validation (GTVNTYP) page

The GTVNTYP page now displays the Activity User in the page footer. The Activity User is the user who last created or updated page. This information is stored in the GTVNTYP (Banner Name Type Codes) table.

This update addresses PE0006778 in the Ellucian Customer Center.

Auditing performance improvements

To improve auditing performance for API users, modifications were made to prevent recording API user ('APIUSER%' and '%API_USER') login entries in the GURLOGN table.

For the updated database procedures, see Updated procedures to support audit performance.

This update addresses PE0006789 in the Ellucian Customer Center.

New BAN_PMT_PARTNER_C security class

Ellucian introduces the new BAN_PMT_PARTNER_C security class to support seamless security configuration for institutions integrating payment partners using Ethos Integration.

Previously, limiting access for an Ethos API user required assigning multiple individual

© 2026 Ellucian Company LLC and its affiliates.

security objects which was both time-consuming and inefficient. The new BAN_PMT_PARTNER_C security class consolidates all required security objects into a single class, allowing you to assign it directly to users for more efficient and improved payment partner integration.

See the attached `BAN_PMT_PARTNER_C Permissions.xlsx` spreadsheet for the latest list of objects included with this security class.

For this release, you must manually insert the objects FTVCOAS and TTVSRCE to the BAN_PMT_PARTNER_C class using the **Banner Security Maintenance(GSASECR)** page. For each object, assign the BAN_DEFAULT_M role. Ellucian will deliver these objects in a future release.

Note: As partner integrations evolve, Ellucian will update the security class. You may need to add individual objects as needed.

This update addresses PE0006800 in the Ellucian Customer Center.

Database updates

For information about the database updates delivered with the Banner General 8.25 release, see Database updates.

Supporting documentation

To download supporting documentation for this release, click **Attachment** on this page and then select the associated compressed file (.zip) from the displayed list. The zip file contains the following files:

- Banner General Resolutions Report 8.25

The content published on the Documentation site for this release and the documentation included in the associated zip file (listed above) also support any associated hot fix releases.

Database updates

Updated: September 18, 2025

Ellucian delivers database updates included with the Banner General 8.25 release.

New triggers to populate SURROGATE_ID column

New triggers now populate the SURROGATE_ID column for each record in the tables shown below. The surrogate ID value is required to identify records for the *duplicate-person-data-cleanup-operations* API.

Table	Scripts
GORCGEO	• gt_gorcgeo_surrogate_id.sql • gos_gorcgeo_seq_082500.sql • gorcgeo_082500_01.sql • gorcgeo_082500_02.sql • gorcgeo_082500_03.sql • gorcgeo_082500_04.sql
GORPAUD	• gt_gorpaud_surrogate_id.sql • gos_gorpaud_seq_082500.sql • gorpaud_082500_01.sql • gorpaud_082500_02.sql • gorpaud_082500_03.sql

© 2026 Ellucian Company LLC and its affiliates.

Table	Scripts
	• gorpaud_082500_04.sql
GURHLOG	• gt_gurhlog_surrogate_id.sql • gos_gurhlog_seq_082500.sql • gurhlog_082500_01.sql • gurhlog_082500_02.sql • gurhlog_082500_03.sql • gurhlog_082500_04.sql

This update addresses PE0006694 in the Ellucian Customer Center.

Updated GUROPTM table

Ellucian introduces a new BASELINE_IND column on the GUROPTM table delivered with a default value of Y where the USER ID is BASELINE. This column supports the new **Baseline Indicator** field on the **Options Maintenance (GUAOPTM)** page. The Banner General 8.25 release delivers the following new and updated scripts.

New DDL and DML scripts:

- `guroptm_082500_01.sql` (DDL)
- `guroptm_082500_02.sql` (DDL)
- `gguroptmu_02500.sql` (DML)

Updated triggers and view:

- `gut_nls_guroptm_iod.sql` (trigger)
- `gut_nls_guroptm_ioi.sql` (trigger)
- `gut_nls_guroptm_iou.sql` (trigger)
- `guvoptm.sql` (view)

© 2026 Ellucian Company LLC and its affiliates.

Updated procedures to support audit performance

To improve auditing performance for API users, modifications were made to prevent recording API user ('APIUSER%' and '%API_USER') login entries in the GURLOGN table.

- g$_banner_security_pkg.g$_audit_banner_logon
- g$_security_pkg.g$_check_logon_rules

This update addresses PE0006789 in the Ellucian Customer Center.

New procedure to support job submission

The `goknosl1` package includes the new `p_submit_gjajobs_proxywallet` procedure to support job submission called from other jobs, procedures, and applications.

This update addresses PE0006943 in the Ellucian Customer Center.

New configuration to support export of translation environment variables

The `gurocfgu_082500.sql` DML script updates the global configuration, `batch.jobs.translation.export.env.vars.enabled`, with a default value of Y.

This update addresses PE0006345 in the Ellucian Customer Center.

Release 9.3.35.1 and 8.24.1

Updated: July 17, 2025

The Banner General 9.3.35.1 and 8.24.1 releases contains enhancements, defect resolutions, and technical currency updates.

Banner 8 Self-Service sustaining support

To support institutions in the final stages of their transition off Banner 8 Self-Service, Ellucian will amend the Support Assurance Policy to provide limited support for Banner 8 Self-Service during the sustaining support phase, October 1 through December 31, 2025. During this time, support will be limited to

© 2026 Ellucian Company LLC and its affiliates.

addressing critical vulnerabilities only. This limited extension is intended to help institutions finalize their transition off Banner 8 Self-Service.

This additional support does NOT include:

- Regulatory updates
- Other security issues not classified as critical vulnerabilities
- Functional defect fixes

If you have not yet transitioned off Banner 8 Self-Service, Ellucian strongly encourages you to contact your Customer Success Manager to finalize your plans, as help and resources are available.

For detailed information on support statuses, please review our Support Assurance Policy.

Changed GOANPID page

The Course and Qualification report types are new to the GOANPID page. Depending upon the report type that you select in the Key block, the page opens the respective report type window that allows you to add and view the various non-person identity regulatory data associated to the report type.

For more information about this page, including field descriptions, see General Overall Administration Non-Person Identity (GOANPID) page.

This update addresses PE0006316 in the Ellucian Customer Center.

Supporting documentation

- Banner General Upgrade Guide

The content published on the Documentation site for this release and the documentation included in the associated zip file (listed above) also support any associated hot fix releases.

Release 9.3.35 and 8.24

Updated: June 20, 2025

The Banner General 9.3.35 and 8.24 releases contain enhancements, technical currency updates, and defect resolutions. The 8.24 release is a cumulative release of all interim releases and patches delivered after the 8.23 release.

Banner 8 Self-Service sustaining support

To support institutions in the final stages of their transition off Banner 8 Self-Service, Ellucian will amend the Support Assurance Policy to provide limited support for Banner 8 Self-Service during the sustaining support phase, October 1 through December 31, 2025. During this time, support will be limited to addressing critical vulnerabilities only. This limited extension is intended to help institutions finalize their transition off Banner 8 Self-Service.

This additional support does NOT include:

- Regulatory updates
- Other security issues not classified as critical vulnerabilities
- Functional defect fixes

plans, as help and resources are available.

For detailed information on support statuses, please review our Support Assurance Policy.

New configuration to enable Banner 9 Self-Service menus and roles

Ellucian introduces the `enableBanner9Menu` global configuration to switch between Banner 8 Web Tailor tables (TW%) and Banner 9 (GU%) tables to manage the new Banner 9 Self-Service menus and roles.

Ellucian delivers the configuration with a default value of `false`. Valid values are `true` (enabled) or `false` (disabled).

- True = Banner uses the menus and authentication roles from the Banner 9 (GU%) tables.
- False = Banner uses the menus and authentication roles from the Banner 8 Web Tailor (TW%) tables.

After you enable this configuration, you must use the following new Banner administrative pages to manage Self-Service menus and roles data stored in the new Banner 9 (GU%) tables.

- **Self-Service Menu Maintenance (GUAWMNU)**
- **Self-Service User Roles Maintenance (GUAWROL)**
- **Self-Service User Role Validation (GUACROL)**

These pages are not enabled on the **Object Maintenance (GUAOBJS) page** by default. Select the **Menu Option** check box to make these pages visible on the Banner menu.

Data in the new Banner 9 (GU%) tables is not synchronized with the old Web Tailor (TW%) tables. After you enable the configuration, Banner Self-Service applications will use the new Banner 9 (GU%) tables to store Banner Self-Service menu and user role data instead of the Web Tailor (TW%) tables. See the table below for the list of new tables.

© 2026 Ellucian Company LLC and its affiliates.

New Banner 9 tables	Web Tailor tables
GUBWMNU	TWGBWMNU
GURBWMN	TWGRMENU
GURWMRL	TWGRWMRL
GURWROL	TWGRROLE
GURVROL	TWTVROLE

Note: Ellucian delivered the new Banner 9 (GU%) menu and role tables with the Banner General 8.22 December 2024 release.

This update addresses PE0005255 in the Ellucian Customer Center.

New Self-Service User Role Validation (GUACROL) page

The **Self-Service User Role Validation (GUACROL)** page is available to define and manage Banner 9 Self-Service custom roles. Previously, managing user roles required direct access to the database to perform insert, update, and delete operations on the Web Tailor TWTVROLE table.

This page is not enabled on the **Object Maintenance (GUAOBJS) page** by default. It is delivered in the BAN_ADMIN_C class with the BAN_DEFAULT_M role.

See Add custom roles to Banner 9 Self-Service and Self-Service User Role Validation (GUACROL) page for more details and instructions to use this page.

This update addresses PE0005255 in the Ellucian Customer Center.

New Banner General (GOANPID) page

The **General Overall Administration Non-Person Identity Details (GOANPID)** page is available to allow persona to enter the available non-person details such as Program, Qualification, and Course information. This non-person search page supports the ERM feature with the non person attributes using the SEID model to support the Global regional variations.

For more information about this page, including field descriptions, see General Overall Administration Non-Person Identity (GOANPID) page.

This update addresses PE0005912 in the Ellucian Customer Center.

© 2026 Ellucian Company LLC and its affiliates.

Batch processing performance improvements

Support added to batch Java framework libraries which allow Cobol2Java batch processes to implement ThreadLocal connections for parallel processing, thereby improving overall performance and efficiency. The following batch Java framework libraries provide this support:

- `gurjbif.jar`
- `ebb-runtime-core-1.0.11.jar`

This update addresses PE0006123 in the Ellucian Customer Center.

Configuration to control export of translation environment variables

The new `batch.jobs.translation.export.env.vars.enabled` configuration is available on the **Banner Applications Configurations (GUACONF)** page for the GLOBAL Application ID. This configuration controls whether to export the following translation environment variables on the job submission server for all PRO*C processes, when the locale selected for the **Jobsubmission Language** field on the **Installation Control Form (GUAINST)** page is a non en-US locale:

- NLS_LANG
- NLS_DATE_FORMAT
- LC_NUMERIC

The default delivered value is N which allows job submission to continue to use the en-US locale for language, date, and numeric formats.

Set the configuration to Y if you want job submission to use the locale-specific (non en-US locale) for language, date, and numeric formats based on the GUAINST page **Jobsubmission Language** field selection.

Be advised of the additional GUACONF settings delivered with the April 2025 Banner General 9.3.34.1 and 8.23.1 releases to resolve PD0020845. These releases delivered the following two configurations in GUACONF to address a defect where Banner PRO*C batch jobs terminated due to locale-specific date and numeric decimal separator formats.

- `batch.jobs.override.canonical.date.format` - overrides the database

© 2026 Ellucian Company LLC and its affiliates.

NLS date format and forces the date format to en-US for the identified batch jobs listed in the **Configuration Value** field

- `batch.jobs.override.canonical.decimal.separator` - overrides the database NLS numeric decimal format and forces the decimal numeric format to en-US for the identified batch jobs listed in the **Configuration Value** field

The two previously delivered canonical configurations mentioned above are independent of the new `batch.jobs.translation.export.env.vars.enabled` configuration. This new configuration applies to all batch PRO*C processes, while the batch jobs override canonical settings only apply to the PRO*C processes identified in the GUACONF configuration.

This update addresses PE0006345 in the Ellucian Customer Center.

Database updates

For information about the database updates delivered with the Banner General 8.24 release, see Database updates.

Supporting documentation

To download supporting documentation for this release, click **Attachment** on this page and then select the associated compressed file (.zip) from the displayed list. The zip file contains the following files:

- Banner General Resolutions Report 8.24
- Banner General Resolutions Report 9.3.35
- Banner General Release Notes 9.3.35 and 8.24
- Banner General Installation Reference 9.3.35
- Banner General readme 8.24
- Banner General Object List 8.24
- Banner General Upgrade Guide Template 8.24

© 2026 Ellucian Company LLC and its affiliates.

- Banner General Configure 9.3.34 and 8.24
- Banner General Use 9.3.35 and 8.24

The content published on the Ellucian Documentation site site for this release and the documentation included in the associated zip file (listed above) also support any associated hot fix releases.

Database updates

Updated: June 20, 2025

Ellucian delivers database updates included with the Banner General 8.24 release.

New enableBanner9Menu configuration

The `gurocfgi_082400.sql` DML script adds the new global configuration, `enableBanner9Menu`, set to false to support Banner 9 Self-Service menu and roles functionality.

This update addresses PE0005255 in the Ellucian Customer Center.

Seed data scripts to support Banner 9 menus and roles

- `gubwmnui_082400.sql`
- `gubwmnui_082400_01.sql`
- `gurbwmnd_082400.sql`
- `gurbwmni_082400_01.sql`
- `gurbwmni_082400_02.sql`
- `gurbwmnu_082400_01.sql`
- `gurwmrli_082400.sql`
- `gurwmrli_082400_01.sql`
- `gurwmrli_082400_02.sql`
- `gurvroli_082400.sql`

© 2026 Ellucian Company LLC and its affiliates.

- `gurbwmnu_082400.sql`
- `ggubobjsi_082400.sql`
- `ggubobjsu_082400.sql`
- `ggubpagei_082400.sql`
- `gguraobji_082400.sql`
- `gguruobji_082400.sql`
- `ggurmenui_082400.sql`
- `ggurmenuu_082400.sql`

This update addresses PE0005255 and PE0006187 in the Ellucian Customer Center.

User grants added

Grants added for BANPROXY, BANINST1_SS9, and BAN_DEFAULT_PAGEBUILDER_M to the following tables:

- `gurvrol_082400_01.sql`
- `gurwmrl_082400_01.sql`
- `gurwrol_082400_01.sql`

This update addresses PE0005255 in the Ellucian Customer Center.

New configuration to support export of translation environment variables

The `gurocfgi_082400.sql` DML script adds the new global configuration, `batch.jobs.translation.export.env.vars.enabled`, with a default value of N.

This update addresses PE0006345 in the Ellucian Customer Center.

© 2026 Ellucian Company LLC and its affiliates.

Release 9.3.34.1 and 8.23.1

Updated: April 17, 2025

The Banner General 9.3.34.1 and 8.23.1 releases contain enhancements and defect resolutions. Optional hot fix releases for Banner General 8.21.0.3 and 8.22.0.2 are also available to apply if you do not plan to upgrade to 8.23.1.

Banner 8 Self-Service sustaining support

To support institutions in the final stages of their transition off Banner 8 Self-Service, Ellucian will amend the Support Assurance Policy to provide limited support for Banner 8 Self-Service during the sustaining support phase, October 1 through December 31, 2025. During this time, support will be limited to addressing critical vulnerabilities only. This limited extension is intended to help institutions finalize their transition off Banner 8 Self-Service.

This additional support does NOT include:

- Regulatory updates
- Other security issues not classified as critical vulnerabilities
- Functional defect fixes

If you have not yet transitioned off Banner 8 Self-Service, Ellucian strongly encourages you to contact your Customer Success Manager to finalize your plans, as help and resources are available.

For detailed information on support statuses, please review our Support Assurance Policy.

Banner batch date and numeric format updates

This update applies only if you are running your Banner batch jobs using a locale other than en-US and the date and numeric format is different than the en-US date and numeric format.

Two new configurations are available to address Banner Pro*C batch jobs that terminate due to locale-specific date and numeric decimal separator formats. These configurations

© 2026 Ellucian Company LLC and its affiliates.

are available on the **Banner Applications Configurations (GUACONF)** page under the GLOBAL application ID. The configurations override the database NLS locale-specific setting as defined in the **Jobsubmission Language** field on the Installation Controls (GUAINST) page and force the date and numeric separators to use the en-US formatting to prevent the job from terminating.

The configurations delivered with this release addresses only Pro*C batch jobs. Ellucian will address Java batch jobs in a future release.

Beginning with the June and September 2024 releases, Ellucian has made improvements to the Banner batch frameworks (Pro*C and Java) to be compatible with regional NLS settings on the job submission server. As Banner products are in the process of updating their batch jobs and incorporating these framework improvements, some batch jobs might require this temporary configuration override to allow the process to continue working in the default en-US language settings.

On the **Configurations** tab of the GUACONF page, find the new configurations listed below. Ellucian does not deliver these new configurations with any specified batch jobs.

- `batch.jobs.override.canonical.date.format` - This setting overrides the database NLS date format and forces the date format to en-US format for any batch jobs listed in the **Configuration Value** field
- `batch.jobs.override.canonical.decimal.separator` - This setting overrides the database NLS numeric decimal format and forces the decimal numeric format to en-US format for any batch jobs listed in the **Configuration Value** field

If you have identified any Banner Pro*C batch jobs that terminate with an error indicating an issue when not using the en-US language settings for date and numeric separators, update one or both of the configurations with that list of Pro*C batch jobs. The field must include a comma-separated list of batch jobs, enclosed in square brackets.

For example, `[FABCHKS, FARAAGE]`

When you run the batch job that you specified in either of the configurations, the process overrides the database NLS locale-specific setting for date and numeric decimal separators with the respective en-US formats.

Note: The process only overrides the date and numeric output formatting and does not affect the rest of the report output.

A few examples of error messages include:

© 2026 Ellucian Company LLC and its affiliates.

- `ORA-01480: Undefined value at the end missing STR link value`
- `ORA-1722: Invalid number`
- `ORA-1843: It's not a valid month`
- `ORA-1850: hours must be between 0 and 23`
- `ORA-6502: PL/SQL: numeric error or error on a value: error converting characters to numbers`

If you receive errors that are different from the examples shown above, and you are not sure if they are related to the locale-specific date and numeric separator formats, contact Ellucian Action Line.

See KB000509717 - Banner Submission date format and decimal separator update for more details.

See Database support for Banner batch date and numeric format updates for the database updates associated with this update.

This update addresses PD0020845 in the Ellucian Customer Center.

GJAPCTL page improvements

The **Process Submission Control (GJAPCTL)** page now validates unique parameters. This allows you to add parameters in order. This update also ensures successful submission of the batch process when using the *process-submission-control* BPAPI call.

This update addresses PE0005955 in the Ellucian Customer Center.

Optional 8.21.0.3 and 8.22.0.2 hot fix releases

The following optional hot fix releases are available to upgrade your 8.21 or 8.22 releases. These releases address PD0020845 as describe above in the Banner batch date and numeric format updates section.

- Release 8.21.0.3
- Release 8.22.0.2

© 2026 Ellucian Company LLC and its affiliates.

Supporting documentation

To download supporting documentation for this release, click **Attachment** on this page and then select the associated compressed file (.zip) from the displayed list. The zip file contains the following files:

- Banner General Upgrade Guide Template 8.23.1

The content published on the Documentation site for this release and the documentation included in the associated zip file (listed above) also support any associated hot fix releases.

Database updates

Updated: April 17, 2025

Ellucian delivers database updates included with the Banner General 8.23 release.

Database support for Banner batch date and numeric format updates

Ellucian has updated the following objects to support Banner batch jobs terminating when not using the en-US language settings for date and numeric separators.

The following DML inserts the seed data for the configurations and list of Banner batch jobs that use the en-US locale for date and numeric formatting.

- `gurocfgi_08210003.sql`

© 2026 Ellucian Company LLC and its affiliates.

- `gurocfgu_08210003.sql`

Updated procedures and new grant script

- `goknlsu.sql`
- `goknlsu1.sql`
- `guaorac2.pc`
- `ban_nlsuser_grants_082301.sql`

This update addresses PD0020845 in the Ellucian Customer Center.

Release 9.3.34 and 8.23

Updated: March 20, 2025

The Banner General 9.3.34 and 8.23 releases contain enhancements and defect resolutions. The 8.23 release is a cumulative release of all interim releases and patches delivered after the 8.22 release.

Banner 8 Self-Service sustaining support

To support institutions in the final stages of their transition off Banner 8 Self-Service, Ellucian will amend the Support Assurance Policy to provide limited support for Banner 8 Self-Service during the sustaining support phase, October 1 through December 31, 2025. During this time, support will be limited to addressing critical vulnerabilities only. This limited extension is intended to help institutions finalize their transition off Banner 8 Self-Service.

This additional support does NOT include:

plans, as help and resources are available.

For detailed information on support statuses, please review our Support Assurance Policy.

New pages for Banner 9 Self-Service menu and role maintenance

This enhancement is part of the ongoing effort to transform Web Tailor functionality from 8x to the Banner 9x technology.

Ellucian introduces new pages to support future functionality for managing Banner 9 Self-Service menus and user roles. Currently, this functionality is not enabled. Ellucian will provide further details in a future release.

The following two new pages are delivered in the BAN_ADMIN_C class with the BAN_DEFAULT_M role. By default, they are not visible on the Banner Application Navigator menu because the **Menu Option** field on the GUAOBJS page is not enabled.

- Self-Service Menu Maintenance (GUAWMNU)
- Self-Service User Roles Maintenance (GUAWROL)

These pages will manage the menu and roles data using the new menu and role tables (GUBWMNU, GURBWMN, GURWMRL, GURWROL, and GURVROL) delivered with enhancement PE0005119 in the Banner General 8.22 December 2024 release. See the New Banner 9 menu and role tables section for more details about the tables included with that release.

Note: Ellucian advises against using these pages until the functionality is enabled in a future release. Any updates made on the GUAWMNU and GUAWROL pages before the functionality is enabled will be saved to the new menu and role tables, but will not affect the current Self-Service menu functionality.

Ellucian delivers the baseline menus as seed data and provides new data structures to manage your local data in the GUBWMNU, GURBWMN, GURWMRL, GURWROL, and GURVROL tables. Data in the existing Web Tailor tables is not affected.

This update addresses PE0005727 in the Ellucian Customer Center.

© 2026 Ellucian Company LLC and its affiliates.

MEP configuration management

This update is in preparation for future functionality to support MEP configuration management and deployments.Ellucian has delivered the following two new pages. By default, these pages are hidden and are not available for use at this time. More information will be available in a future release.

- MEP Module and Table Implementation (GOIVTAB)
- MEP Modules (GOAVMOD)

This update addresses PE0004973 in the Ellucian Customer Center.

Database updates

To information about the database updates delivered with the Banner General 8.23 release, see Database updates.

Supporting documentation

To download supporting documentation for this release, click **Attachment** on this page and then select the associated compressed file (.zip) from the displayed list. The zip file contains the following files:

- Banner General Object List 8.23
- Banner General Upgrade Guide Template 8.23
- Banner General Page List 9.3.34
- Banner General Get Started 9.3.34 and 8.23
- Banner General Configure 9.3.34 and 8.23
- Banner General Use 9.3.34 and 8.23

© 2026 Ellucian Company LLC and its affiliates.

The content published on the Documentation site for this release and the documentation included in the associated zip file (listed above) also support any associated hot fix releases.

Database updates

Updated: March 20, 2025

Ellucian delivers database updates included with the Banner General 8.23 release.

HESA regulatory enhancements

To support the HESA regulatory enhancements, the following updates are available with the Banner General 8.23 release.

This update addresses PE0005577 in the Ellucian Customer Center.

- New tables:
    - The GORSKEY table stores the non-person identity key values
    - The GORNPID table stored the non-person identity report details
- The following seed data is available to support the regulatory enhancements.

Table Names	Changes
GUBMEPO	Seed data available for the GORSKEY and GORNPID tables: • GUBMEPO_NAME • GUBMEPO_OWNER • GUBMEPO_CATEGORY • GUBMEPO_SYSI_CODE • GUBMEPO_OWNER_SECURITY • GUBMEPO_ALL_SECURITY • GUBMEPO_USER_ID • GUBMEPO_ACTIVITY_DATE

© 2026 Ellucian Company LLC and its affiliates.

Table Names	Changes
• GORSEID • GORSETP • GTVSEID • GTVSEIR	Seed data for General Overall Administration Non-Person Identity Details (GOANPID) page to report **Course**, **Qualification**, and **Module** fields details.
• GUBOBJS • GUBPAGE • GURAOBJ • GURMENU • GURUOBJ	DML to support the entry of GOANPID page in Application Navigator.
• GORNPID • GORSKEY	Updates to the GT_GORNPID_SURROGATE_ID and GT_GORSKEY_SURROGATE_ID columns to include triggers for the GORSKEY and GORNPID tables.

Banner 9 Self-Service menu and role maintenance seed data

The following scripts provide the seed data and new data structures to manage local data in the GUBWMNU, GURBWMN, GURWMRL, GURWROL, and GURVROL tables.

- `gubwmnui_082300.sql`
- `gubwmnui_082300_01.sql`
- `gurbwmni_082300.sql`
- `gurbwmni_082300_01.sql`
- `gurwmrli_082300.sql`
- `gurwmrli_082300_01.sql`
- `gurvroli_082300.sql`
- `gurwroli_082300.sql`

© 2026 Ellucian Company LLC and its affiliates.

This update addresses PE0005727 in the Ellucian Customer Center.

EDM configurations moved to GLOBAL application

Note: Ellucian Document Management (EDM) is currently a beta release.

To allow for integration of Banner applications with Ellucian Document Management, Ellucian moved the seed data belonging to the EDM application schema to the GLOBAL application schema and removed the EDM application schema. As a result, the corresponding configurations on the **Banner ApplicationsConfigurations (GUACONF)** page for the EDM Application ID are now available for the GLOBAL Application ID. This eliminates the dependency on the EDM application within GUACONF.

The following configurations have moved from the EDM application to the GLOBAL application, with the exception of edm_s3_url which is a new configuration.

- banner_in_experience
- client_id
- client_secret
- edm_auth_url
- edm_config_url
- edm_console_url
- edmEnabled
- edm_metadata_url
- edm_s3_url (NEW)
- grant_type
- oauth_url
- resource
- storage_id
- tenant_id

DML scripts:

© 2026 Ellucian Company LLC and its affiliates.

- `gubappId_082300.sql`
- `gurocfgd_082300.sql`
- `gurocfgi_082300.sql`

This update addresses PE0005790 in the Ellucian Customer Center.

Updated tables to support spec API in the integration API application

Ellucian added the following columns to the Query Builder (GORDBQC) and Compiled Query Builder (GORDQBD) tables to support API versioning.

Table	Column added	Type
GORDBQC	GORDBQC_APP_VERSION	VARCHAR(15)
GORDQBD	GORDQBD_QUERY_VERSIO N	VARCHAR(100)

This update addresses PE0005773 in the Ellucian Customer Center.

© 2026 Ellucian Company LLC and its affiliates.

2024 Releases

Updated: March 20, 2025

Release 9.3.33 and 8.22

Updated: December 12, 2024

The Banner General 9.3.33 and 8.22 releases contain enhancements, defect resolutions, and technical currency updates. The 8.22 release is a cumulative release of all interim releases and patches delivered after the 8.21 release.

Preferred first name display and search

This update addresses PE0004870 in the Ellucian Customer Center.

Ellucian introduces functionality that allows the institution to display a person's preferred first name, instead of their first name, in the Key block of any Banner administrative page that displays a person's name information. You can also use the new **Preferred First Name** field on the **SSN/SIN/TIN Alternate ID Search (GUIALTI)** and **Person Search (SOAIDEN)** pages to filter and search for user IDs using the preferred first name as search criteria.

Ellucian delivers a new PREFERRED_NAME usage rule that you must enable on the **Name Display Rules (GUANDSP)** page to display a person's preferred first name as specified in the **Preferred First Name** field on a Banner person identification page (such as SPAIDEN). This rule is not enabled by default.

If the PREFERRED_NAME rule is active and a person does not have a preferred first name specified, the usage rule will display the person's first name by default.

Enable the PREFERRED_NAME usage rule:

1. Access **Name Display Rules (GUANDSP)** page.
2. Click **Filter** and filter on `PREFERRED_NAME` in the **Usage Name** field.
3. Select the **Active** check box to enable the rule and save the change.

© 2026 Ellucian Company LLC and its affiliates.

Tip: Changing the delivered display rules might cause an undesirable name display.

See Preferred first name display support to review the database updates that support this enhancement.

Person Manager address verification integration service

This release includes additional support and functionality for the Person Manager Address Verification Service. This update addresses PE0004667 in the Ellucian Customer Center.

Ellucian has enhanced the **Common Matching Entry (GOAMTCH)** page to provide Person Manager Address Verification Service functionality.

See Database support for Person Manager address verification service for the database updates that support this enhancement

Alternate Role Maintenance (GJRIROL) process update

Ellucian has updated the Alternate Role Maintenance (GJRIROL) Java batch process to bring the GJRIROL process into parity with GURIROL and resolve any differences between the two processes.

This update addresses PE0004578 in the Ellucian Customer Center.

GJRIROL updates include:

- Ability to process roles for a population selection
- Ability to process roles at one time for all institutions in a MEPed environment rather than running the process for each institution.
- Excludes deceased individuals and non-person entities from role processing.

The following parameters are now available for use with the GJRIROL process:

- 03 - Application Code
- 04 - Selection ID
- 05 - Creator ID
- 06 - User ID

© 2026 Ellucian Company LLC and its affiliates.

Although the GURIROL process is still available, Ellucian recommends running the GJRIROL process instead of GURIROL because it offers improved performance.

See Database support for Alternate Role Maintenance (GJRIROL) process for the database updates that support this enhancement.

Activity Date enabled for the Person Data Extract and Upload (GORPERX) process

Ellucian has modified the Person Data Extract and Upload (GORPERX) process to extract the `Activity_Date` column from Banner tables by default. The `timestamp.keep` configuration property is now set to `true`. This setting was initially disabled but is now enabled as part of the baseline delivery with Banner General 8.22.

This update addresses PE0005166 in the Ellucian Customer Center.

New Source Background Type Validation (GTVSBGT) page

The new **Source Background Type Validation (GTVSBGT)** page provides new validation functionality used to capture multiple institution codes in Banner to support California Community Colleges' eTranscriptCA layout specifications.

Use this page to create, update, insert, and delete source background validation codes, such as the County-District- School (CDS) code and the College Entrance Examination Board (CEEB) code, and so on. For more information about this page, including field descriptions, see Source Background Type Validation (GTVSBGT) page.

See New tables to support California Community Colleges' requirements for eTranscriptCA GTVSBGT page for the database updates that support this enhancement.

This update addresses PE0004859 in the Ellucian Customer Center.

New Multi-Entity Processing (MEP) module tables

This update addresses PE0004973 in the Ellucian Customer Center.

In preparation for future enhancements to automatically MEP new tables during a SaaS upgrade, Ellucian delivers new tables used to store MEP Modules and associated tables, and the institution's MEP implementation details. Institutions with an on-premise implementation can review the MEP Modules and tables to determine if they need to implement MEP to new tables.

© 2026 Ellucian Company LLC and its affiliates.

The new tables store a new MEP Module entity used to group tables for the purpose of implementing MEP. The modules include all tables that have a common relationship and similar MEP policies grouped together based on foreign key constraints and business processes. A few examples of MEP modules include Human Resources, Accounts Receivable, Student Catalog/Schedule. The MEP modules and customer MEP rules for each module will be used to automatically MEP new tables during a SaaS upgrade.

Ellucian will deliver the MEP Modules and associated tables with future Banner releases in addition to a new page and process used to populate the MEP implementation.

See New tables to support Multi-Entity Processing (MEP) modules for the list of delivered tables.

ICU 73.2 upgrade for AIX 7.2

This update addresses PE0004610 in the Ellucian Customer Center.

In an effort to maintain technical currency and improve performance, reliability, and security, Ellucian has certified International Components for Unicode (ICU) version 73.2 for Banner C/C++ processes for AIX 7.2.

At this time, institutions are not required to upgrade to ICU 73.2, but Ellucian strongly recommends customers always operate on software versions that are actively supported as ICU 73.2 addresses vulnerabilities within the ICU library.

Review the table below for the operating system and compiler requirements for upgrading to ICU 73.2.

Note: Ellucian no longer supports Redhat Linux 7.

Table 1: ICU 73.2 OS and compiler requirements

Operating System	Required compiler
AIX 7.2	gcc/g++ 11.3.0
Oracle Linux 7	devtoolset-8 for gcc/g++ 8.22
Oracle Linux 8	gcc/c++ 8.5.0
Red Hat Linux 8	gcc/c++ 8.5.0
Solaris 11	gcc/g++ 11.4
Windows 2016	MS Visual Studio 2015 Version 14.0
Windows 2019	MS Visual Studio 2017 Version 14.16

© 2026 Ellucian Company LLC and its affiliates.

Ellucian delivers the following updated files in `general_baseline/code/c` to support the ICU 73.2 upgrade for AIX 7.2.

- `Makefile_tm.aix-gcc` (AIX 7.2 only)
- `sctproc.mk.aix-gcc` (AIX 7.2 only)
  Before using these files, backup your existing `Makfile_tm` and `sctproc.mk` files. After you create the backup files, copy `Makefile_tm.aix-gcc` to `Makfile_tm` and `sctproc.mk.aix-gcc` to `sctproc.mk`.

Note: Ellucian also includes the following files in `general_baseline/code/c` to support using ICU 58.3 for AIX 7.2

- `Makefile_tm.aix-xlc`
- `sctproc.mk.aix-xlc`

Before using these files, backup your existing `Makfile_tm` and `sctproc.mk` files. After you have created the backup files, copy `Makefile_tm.aix-xlc` to `Makfile_tm` and `sctproc.mk.aix-xlc` to `sctproc.mk`.

The `banner_icu4c-73_2.trz` file is available to download from the Ellucian Downloads

Customers upgrading to the Banner General 8.22 release, have the option to compile Banner Pro*C processes against ICU 58.3 or upgrade to ICU 73.2 library. With the Banner General 8.22 upgrade, Ellucian enhanced the `Makefile_tm` file to provide ICU backward compatibility by referencing an environment variable, ICU_FLAGS, on the Banner job submission server.

Follow the steps below to set the ICU_FLAGS environment variable on the Job Submission server:

1. Set an environment variable ICU_FLAGS in the OS user profile (`.profile` or `.bash_profile`) responsible for executing the ICU compilation process.
2. Export the variable with a value when upgrading to ICU 73.2 as shown below.

   Note: If you continue to use ICU 58.3, leave the environment variable empty.

   Enter `export ICU_FLAGS="-std=c++11";`

© 2026 Ellucian Company LLC and its affiliates.

3. Compile the Banner Pro*C processes like any other install / upgrade.

For instructions to upgrade and compile ICU 73.2, see the *Technical Reference Manual* PDF attached to the Banner General Technical Reference Manual (TRM) supplement topic in the Ellucian Documentation site.

Supporting documentation

To download supporting documentation for this release, click **Attachment** on this page and then select the associated compressed file (.zip) from the displayed list. The zip file contains the following files:

- Banner General Resolutions Report 8.22
- Banner General Resolutions Report 9.3.33
- Banner General Release Notes 9.3.33 and 8.22
- Banner General Installation Reference 9.3.32
- Banner General readme 8.22
- Banner General Object List 8.22
- Banner General Upgrade Guide Template 8.22
- Banner General Page List 9.3.33
- Banner General Get Started 9.3.33 and 8.22
- Banner General Configure 9.3.33 and 8.22
- Banner General Use 9.3.33 and 8.22

The content published on the Documentation site for this release and the documentation included in the associated zip file (listed above) also support any associated hot fix releases.

Database updates

Updated: December 12, 2024

Ellucian delivers database updates to support enhancements included with the Banner General 9.3.33 and 8.22 release.

© 2026 Ellucian Company LLC and its affiliates.

Preferred first name display support

Ellucian delivers the updated view and DML to support the display of a person's preferred first name in the Key block of a Banner administrative page.

- `ggurndspi_082200.sql` - adds PREFERRED_NAME usage rule which captures the preferred first name as priority 1.
- `guvalti.sql` - adds GUVALTI_PREF_FIRST_NAME column to GUVALTI view to allow accessibility from the **SSN/SIN/TIN Alternate ID Search (GUIALTI)** page.

Database support for Person Manager address verification service

These updates support the Person Manager Address Verification Service. This enhancement addresses PE0004667 in the Ellucian Customer Center.

The following DDL scripts add new table columns, `GENIDEN_REVIEWED_IND` and `GENIDEN_REVIEWED_USER` to the GENIDEN table. The GORSRIN batch process copies these values from the GENIDEN table to the SPRADDR table.

- `geniden_082200_01.sql`
- `geniden_082200_02.sql`
- `geniden_082200_03.sql`

DBPROC scripts updated to support new `GENIDEN_REVIEWED_IND` and `GENIDEN_REVIEWED_USER` columns.

- `gekb_geniden0.sql`
- `gekb_geniden1.sql`
- `gekb_geniden_r0.sql`
- `gekb_geniden_r1.sql`
- `gekd_geniden0.sql`
- `gekd_geniden1.sql`

© 2026 Ellucian Company LLC and its affiliates.

Database support for Alternate Role Maintenance (GJRIROL) process

Ellucian delivers the `ggjbpdefi_082200.sql` and `ggjbpdfti_082200.sql` DML scripts to insert the following population selection parameters into the GJBPDEF and GJBPDFT tables.

- 03 - Application Code
- 04 - Selection ID
- 05 - Creator ID
- 06 - User ID

New Banner 9 menu and role tables

Ellucian delivers new menu and roles tables described below to support migration of the 8x equivalent tables. These tables set up the infrastructure to support future functionality for baseline and local menu, and role security. These tables do not provide any functionality at this time and there is no impact to the existing tables or data. Do not populate these new tables with data.

This update resolves PE0005119 in the Ellucian Customer Center.

New table	Description	DDL
GUBWMNU	Main Page Settings table	• `gubwmnu_082200_01.sql` • `gubwmnu_082200_02.sql` • `gubwmnu_082200_03.sql` • `gubwmnu_082200_04.sql` • `gubwmnu_082200_05.sql` • `gos_gubwmnu_seq_082`

© 2026 Ellucian Company LLC and its affiliates.

New table	Description	DDL
		200.sql
GURBWMN	Repeating Menu Item table	• gurbwmn_082200_01.sql • gurbwmn_082200_02.sql • gurbwmn_082200_03.sql • gubwmnu_082200_04.sql • gurbwmn_082200_05.sql • gurbwmn_082200_06.sql • gos_gurbwmn_seq_082200.sql
GURWMRL	Menu Roles table	• gurwmrl_082200_01.sql • gurwmrl_082200_02.sql • gurwmrl_082200_03.sql • gurwmrl_082200_04.sql • gurwmrl_082200_05.sql

- gt_gurbwmn_surrogate_id.sql
- gt_gurvrol_surrogate_id.sql
- gt_gurwmrl_surrogate_id.sql
- gt_gurwrol_surrogate_id.sql

Database support for Asynchronous API batch processes

Ellucian delivers the new Batch Job information (GOBBREQ) table and associated scripts to prepare for and support future availability of asynchronous API batch processing. This table will store the result details such as job statuses and request/response information. This update addresses PE0004892 in the Ellucian Customer Center.

New DDL and DBPROC scripts:

- gobbreq_082200_01.sql
- gobbreq_082200_02.sql
- gobbreq_082200_03.sql
- gobbreq_082200_04.sql

- gobbreq_082200_06.sql
- gobbreq_082200_07.sql
- gos_gobbreq_seq_082200.sql
- gos_gobbreq_batch_request_id_seq_082200.sql

© 2026 Ellucian Company LLC and its affiliates.

- `gt_gobbreq_surrogate_id.sql`

New tables to support Multi-Entity Processing (MEP) modules

In support of future functionality to automatically MEP new tables during a SaaS upgrade, Ellucian delivers the following new tables used to define the MEP modules, table assignments, and the institution's MEP implementation rules.

Table 1: GTVVMOD - MEP Module

Column	Description
GTVVMOD_CODE	CODE: MEP Module
GTVVMOD_DESC	DESCRIPTION: MEP Module Description
GTVVMOD_SYSTEM_REQ_IND	SYSTEM REQUIRED INDICATOR: Indicator if row is system required
GTVVMOD_ACTIVITY_DATE	ACTIVITY DATE: Most recent date when the record was created or updated
GTVVMOD_USER_ID	USER ID: This field identifies the system user
GTVVMOD_REQUIRE_ALLOW_CDE	REQUIRE ALLOW MEP CODE: Require or allow, not allow tables in the module to have MEP implemented
GTVVMOD_SURROGATE_ID	SURROGATE ID: Immutable unique key
GTVVMOD_VERSION	VERSION: Optimistic lock token
GTVVMOD_DATA_ORIGIN	DATA ORIGIN: Source system that created or updated the data
GTVVMOD_VPDI_CODE	VPDI CODE: Multi-entity processing code

Table 2: GORVTAB - MEP Module Tables

Column	Description
GORVTAB_VMOD_CODE	CODE: MEP Module
GORVTAB_OWNER	OWNER: MEP table owner
GORVTAB_TABLE	TABLE: MEP Module table
GORVTAB_ACTIVITY_DATE	ACTIVITY DATE: Most recent date when the record was created or updated
GORVTAB_USER_ID	USER ID: This field identifies the system

© 2026 Ellucian Company LLC and its affiliates.

Column	Description
	user
GORVTAB_SURROGATE_ID	SURROGATE ID: Immutable unique key
GORVTAB_VERSION	VERSION: Optimistic lock token
GORVTAB_DATA_ORIGIN	DATA ORIGIN: Source system that created or updated the data
GORVTAB_VPDI_CODE	VPDI CODE: Multi-entity processing code

Table 3: GORVMOD - MEP Module Implementation Rule

Column	Description
GORVMOD_VMOD_CODE	CODE: MEP Module
GORVMOD_ENABLE_IND	ENABLE INDICATOR: Indicator client has the Mep Module implemented
GORVMOD_ACTIVITY_DATE	ACTIVITY DATE: Most recent date when the record was created or updated
GORVMOD_USER_ID	USER ID: This field identifies the system user
GORVMOD_SURROGATE_ID	SURROGATE ID: Immutable unique key
GORVMOD_VERSION	VERSION: Optimistic lock token
GORVMOD_OWNER_SECURITY	OWNER SECURITY: Owner security 1 to 15, combinations of select, insert, update, delete options
GORVMOD_ALL_SECURITY	ALL SECURITY: All others security 1 to 15, combinations of select, insert, update, delete options
GORVMOD_DATA_ORIGIN	DATA ORIGIN: Source system that created or updated the data
GORVTAB_VPDI_CODE	VPDI CODE: Multi-entity processing code

Updated table to support new security APIs

Ellucian added a new Global Unique Identifier (GUID) column to the Enterprise Oracle Access (GOBEACC) table to support new Banner security APIs.

The following scripts and are associated with new security APIs delivered with the Banner

© 2026 Ellucian Company LLC and its affiliates.

Integration API 9.3.36 December release.

- `ggjbpvali_082200.sql` - inserts tables as GURGUID job parameters.
- `ggurtrcki_082200.sql` - inserts tables for GURGUID processing
- `gt_gobeacc_guid_trg.sql` new trigger used to populate the GUID column for the GOBEACC table.

New table to support future Application Auditing enhancement

In preparation for a future Application Auditing enhancement that will streamline the cleanup of duplicate PIDMs, the Banner General 8.22 release delivers the new Application Audit (GURAPAU) table as part of the Application Auditing infrastructure. The functionality is still under development and not available at this time. Ellucian will deliver the functionality and documentation when complete with a future release.

New tables to support Latin America Identity Documents - GENIDOC

Ellucian delivers new tables and seed data to support the ability to maintain Latin America Identity Documents using the new LAC Identity Documents GENIDOC product.

The GENIDOC functionality allows institution officials and students to consult and modify their associated identity documents. Additionally, the administrative officer can enter new identity documents. Use this functionality to create, update, and delete many types of documents as needed by the Institution or as required by law.

New tables:

- GVVADID - Additional Identity Document Types
- GVRADID - Person Additional Identity Documents
- GVRADIH - Person Additional Identity Documents History
- GVVIDVC - Identity Document Types

The `ggvvidvci_080000.sql` DML script generates the validation catalog.

For more details about GENIDOC, see the Banner GENIDOC release notes available on the Ellucian Documentation site.

© 2026 Ellucian Company LLC and its affiliates.

New tables to support California Community Colleges' requirements for eTranscriptCA GTVSBGT page

Ellucian delivers the following new tables to satisfy California Community Colleges' requirements for capturing multiple institution code types in Banner to support eTranscriptCA layout specifications

- GORSBGT - Source Background Institution Code table
- GTVSBGT - Source Background Type Validation table

Technical currency updates

Updated: December 12, 2024

The December 2024 Banner General 9.3.33 and 8.22 releases include technical currency changes to improve product quality, upgrade to current releases of third-party software, improve stability, and maintain security standards.

For more information about these updates, see Banner Admin Common Releases 9.3.37 and 9.3.36.4.

Note: Ellucian strongly recommends customers always operate on software versions that we actively support and advises Banner users to promptly apply this upgrade as it addresses vulnerabilities in Ellucian code and third-party components.

Spring framework, Spring-Boot and Spring-Batch upgrades

The Banner General 8.22 release delivers Java batch jobs with upgraded Spring 6.1.x libraries listed below. Running Spring 6.1.x batch Java jobs requires Java 17 or Java 21 runtime on your Banner Job Submission server.

- Spring Framework 6.1.12
- Spring-Boot 3.3.3
- Spring-Batch 5.1.2

Note: Ellucian provides Java 8 runtime support for one-back version compatibility. Java 8 runtime support will be removed in a future release.

Ellucian provides support for both Spring 5.x and Spring 6.1.x libraries using environment

© 2026 Ellucian Company LLC and its affiliates.

variables in the `banjavaenv` file on the Job Submission server. Based on the target JVM (compatible with Java 8, Java 17, or Java 21), these variables control the versions of the dependent Spring libraries (JAR files) that are referenced in the classpath of the driver scripts for the various Spring Batch jobs.

Ellucian has updated the classpath entries in all of the Banner Cobol2Java batch job driver scripts to reference the dependent Spring libraries (JAR files).

Additionally, Ellucian updated the Banner General Java batch jobs and driver scripts listed below using Spring Framework 6.1.12 and Spring Batch 5.1.2 libraries for this release. The Spring Batch project jar files were compiled in Java 17 byte-code and versioned as 2.0.0 to run in a Java 17 or Java 21 runtime environment. Ellucian has distributed the one-back version support of the project jar files with this release and they will continue to run on a Java 8 runtime environment.

- Data Privacy Delete (GJRDPDE)
- Ethos Bulk Transformation (GUAEBLT)

Release 9.3.32 and 8.21

Updated: September 19, 2024

The Banner General 9.3.32 and 8.21 releases contain enhancements, defect resolutions, and technical currency updates. The 8.21 release is a cumulative release of all interim releases and patches delivered after the 8.20 release.

Alignment of Banner product and language releases

This update addresses PE0004291 in the Ellucian Customer Center.

Ellucian has aligned the Banner product and language releases. This significant enhancement simplifies the Banner upgrade process by eliminating the need to install or recompile secondary language releases. See Article KB000507169 - Aligning Banner product and language releases for September 2024 and onward in the Ellucian Customer Center.

For details about the Banner General 8.21 release requirements and updates that support this alignment, see Product and language release alignment details.

© 2026 Ellucian Company LLC and its affiliates.

Updated processes to support translated messages

This update addresses PE0004428 in the Ellucian Customer Center.

Updated the following processes to ensure that messages are written to the LOG/LIS/etc files after the application initializes. The initialization process determines the locale and language settings. Messages written before initialization will appear in English only, regardless of the locale/language settings.

- Sevis Batch Export Program (GORSEVE)
- SDE Inquiry and Delete (GUSMDID)

Person Manager address verification integration service (Beta)

This update addresses PE0004307 in the Ellucian Customer Center.

Requirements to use the Person Manager Address Verification Service functionality:

- Install the following Banner releases:
    - Banner Admin Common 9.3.36 (June 2024) or later
    - Banner General 8.21 (June 2024) or later
    - Banner General 9.3.32 (June 2024) or later
- Turn off or disable any third-party address verification service that is enabled. For example, Runner or Initium. If you have a third-party provider already configured, that service will take precedence over the Person Manager Address Verification Service. See Configure Person Manager address verification service in Banner for more information.

This release includes additional support and functionality for the Person Manager Address Verification Service beta feature introduced with the Banner General 9.3.31 and 8.20 June 2024 releases. See Person Manager address verification integration service (BETA) for previous release details.

International address verification support is available with Person Manager Address Verification Service provided that your institution has the appropriate address verification service provider license.

Additional Person Manager Address Verification Service functionality is now available

© 2026 Ellucian Company LLC and its affiliates.

with the following pages:

- **Emergency Contact (SPAEMRG)**
- **Address Review and Verification (GOAADDR)**
- **General Person Identification (SPAIDEN)** - Emergency Contact tab

As of September 2024, Ellucian provides Person Manager Address Verification Service integration only with the pages listed below. Additional pages that support address verification will be available with future releases of the Banner Administrative pages.

- FTMAGCY
- FTMCUST
- FTMFMGR
- FTMVEND
- GOAADDR
- SAAQUIK
- SPAEMRG
- SPAIDEN
- SRAQUIK

Banner Applications Configurations (GUACONF)

Ellucian now delivers seed data to add the following two configurations to the GUACONF page, but you must enter the configuration values.

For the beta feature, create a support case in the Ellucian Customer Center to request the *`ClientId`* and *`secret`* configuration values.

Configuration Name	Type	Value
address.verify.integration.person.manager.clientId	string	Default value = *`UPDATE_ME`* Enter the *`client ID`* used with the client secret for generating the OAuth request.

© 2026 Ellucian Company LLC and its affiliates.

Configuration Name	Type	Value
		Get the value from Ellucian.
address.verify.integration.person.manager.secret	string	Default value = *UPDATE_ME* Enter the *client secret* used with client ID for generating the OAuth request

Table 1: Supporting documentation for Person Manager address verification

Banner General Configure and Use • Configure Person Manager address verification service in Banner • Use Person Manager address verification service to create or update addresses • Review and verify addresses	Instructions to configure and use Person Manager Address Verification Service with Banner administrative pages

Upgrade International Components for Unicode (ICU) to version 73.2

This update addresses PE0004427 in the Ellucian Customer Center.

In an effort to maintain technical currency and improve performance, reliability, and security, Ellucian has certified International Components for Unicode (ICU) version 73.2 for Banner C/C++ processes for Solaris and Windows based job submission server environments. As of this release, Ellucian has not yet certified ICU 73.2 for AIX 7.2.

© 2026 Ellucian Company LLC and its affiliates.

At this time, institutions are not required to upgrade to ICU 73.2, but Ellucian strongly recommends customers always operate on software versions that are actively supported as ICU 73.2 addresses vulnerabilities within the ICU library.

Review the table below for the operating system and compiler requirements for upgrading to ICU 73.2.

Note: Ellucian no longer supports Redhat Linux 7.

Table 2: ICU 73.2 OS and compiler requirements

Operating System	Required compiler
Oracle Linux 7	devtoolset-8 for gcc/g++ 8.22
Oracle Linux 8	gcc/c++ 8.5.0
Red Hat Linux 8	gcc/c++ 8.5.0
Solaris 11	gcc/g++ 11.4
Windows 2016	MS Visual Studio 2015 Version 14.0
Windows 2019	MS Visual Studio 2017 Version 14.16

Ellucian delivers the following updated files in `general_baseline/code/c` to support the ICU 73.2 upgrade.

- `Makefile_tm.solaris-gcc` (Solaris 11 only)
- `sctproc.mk.solaris-gcc` (Solaris 11 only)
- `tmcilib.h`

The `banner_icu4c-73_2.trz` file is available to download from the Ellucian Downloads

For the list of ICU support files previously delivered with the Banner General 9.3.31 and 8.20 June release, see Updated support files for future ICU 73.2 upgrade.

Customers upgrading to the Banner General 8.21 release, have the option to compile Banner Pro*C processes against ICU 58.3 or upgrade to ICU 73.2 library. With the Banner General 8.21 upgrade, Ellucian enhanced the `Makefile_tm` file to provide ICU backward compatibility by referencing an environment variable, ICU_FLAGS, on the Banner job submission server.

Follow the steps below to set the ICU_FLAGS environment variable on the Job

© 2026 Ellucian Company LLC and its affiliates.

Submission server:

1. Set an environment variable ICU_FLAGS in the OS user profile (`.profile` or `.bash_profile`) responsible for executing the ICU compilation process.
2. Export the variable with a value when upgrading to ICU 73.2 as shown below.

   Note: If you continue to use ICU 58.3, leave the environment variable empty.

   Enter `export ICU_FLAGS="-std=c++11";`

3. Compile the Banner Pro*C processes like any other install / upgrade.

For instructions to upgrade and compile ICU 73.2, see the *Technical Reference Manual* PDF attached to the Banner General Technical Reference Manual (TRM) supplement topic in the Ellucian Documentation site.

Updated access to the Oracle Directory File Transfer (GKAODFT) page

This update addresses PE0004500 in the Ellucian Customer Center.

The GKAODFT page no longer searches for Oracle directory write/read permissions in the user_tab_privs table. Instead, the page now looks up the user's access privileges based on the user's assigned roles and no longer requires a DBA to run external grant scripts.

See Database support for GKAODFT page for the database changes associated with this enhancement.

COBOL process support has ended

Ellucian officially ended support for COBOL processes on November 30, 2023.

Ellucian no longer supports the following Banner General COBOL processes:

- GLBLSEL - Letter Extract (replaced by GLBLSELJ)
- GLOLETT - Parameter Selection Compile (replaced by GLOLETTJ)
- GLBDATA - Population Selection Extract (replaced by GLBDATAJ)
- GLBPARM - Parameter Selection Compile (replaced by GLBPARMJ)
- GUAVRFY - User ID/Password Verification (replaced by GUAVRFYJ)

© 2026 Ellucian Company LLC and its affiliates.

As a reminder, Ellucian does not support customizations to these processes.

For more information about this change, see Knowledge base article 000051644 - Support of COBOL processes in Banner.

Product and language release alignment details

Updated: September 19, 2024

The Banner General 8.21 release enables the Banner batch C framework changes delivered with the Banner General 8.20 release (Phase 1), and delivers the DML to support the alignment of the Banner product and language releases.

© 2026 Ellucian Company LLC and its affiliates.

In preparation for this alignment, Ellucian delivered the support and functionality in two phases, as described in the table below.

Phase/Release	Deliverable
Phase 1 - June 2024	See Batch job submission release phases for more details about phase 1. • Banner batch C framework improvements. • New **Jobsubmission Language** field added to the **Installation Control Form (GUAINST)** page to set the language for batch jobs
Phase 2 - September 2024	• Functionality to translate batch C messages enabled. • DML to insert into the language string tables with the Banner product releases. This provides translations for Banner batch C messages, menu data, job submission (*Jobsub*) data, and Banner PL/SQL Database Stored Procedure (DBPROC) objects. Subsequent Banner releases will only include new or modified translated objects.

Requirements to retrieve translated job submission output

Before job submission batch C processes can retrieve translated output from the NLS tables, ensure the following items are complete:

- You must recompile all batch C processes delivered with each of your September Banner product releases to enable the new job submission batch C framework to retrieve translated messages from the database.

  Warning! Do not recompile any of your earlier (before September) product releases with Banner General 8.21. Doing so will prevent the retrieval of translated messages.

  Enabling the framework causes the code to execute the new `guaorac2.pc` methods that retrieve the translated messages from the NLS database tables.

  Note: After the September 2024 release, batch C will no longer need to be recompiled

© 2026 Ellucian Company LLC and its affiliates.

to encapsulate translation messages.

- Select a language using the **Jobsubmission Language** field on the **Installation Control Form (GUAINST)** page to set the institution language for all batch process output.

Language setting and supported languages

When you define the language and locale for your job submission output, Banner batch C processes retrieve the translated output from the database, if it is available for that language.

If you define the job submission language to use the default (00-00 or en-US), the new method calls will execute without querying the database for translated values. Setting the language to any option other than the default language will cause the method to check for available process translations and query the database.

See the following table for a list of supported languages for job submission batch translations.

Browser Language	NLS Session Language	Territory
es	LATIN AMERICAN SPANISH	SPAIN
es-AR	LATIN AMERICAN SPANISH	ARGENTINA
es-CL	LATIN AMERICAN SPANISH	CHILE
es-CO	LATIN AMERICAN SPANISH	COLOMBIA
es-CR	LATIN AMERICAN SPANISH	COSTA RICA
es-DO	LATIN AMERICAN SPANISH	REPUBLICA DOMINICANA
es-EC	LATIN AMERICAN SPANISH	ECUADOR
es-GT	LATIN AMERICAN SPANISH	GUATEMALA
es-MX	LATIN AMERICAN SPANISH	MEXICO
es-PA	LATIN AMERICAN SPANISH	PANAMA
es-PE	LATIN AMERICAN SPANISH	PERU
es-PR	LATIN AMERICAN SPANISH	PUERTO RICO
es-VE	LATIN AMERICAN SPANISH	VENEZUELA
fr	FRENCH	FRANCE
fr-CA	CANADIAN FRENCH	CANADA

© 2026 Ellucian Company LLC and its affiliates.

Browser Language	NLS Session Language	Territory
fr-FR	FRENCH	FRANCE

Job submission batch translation process

After you define the language on the GUAINST page, the batch framework works seamlessly to deliver the translated output as described below.

- The Banner batch framework uses the value defined on the GUAINST page to select the language and set the environment locale and date format variables for the institution language and locale.
- Batch C jobs set the database session parameters to the institution language and date format.
- All labels, headers, and titles used in batch C jobs select the translated message from the Banner NSLUSER schema tables if translation is available for the job and language.

Database updates

Updated: September 19, 2024

New and modified database objects to support enhancements included with the Banner General 8.21 release.

Database support for Person Manager address verification service

New scripts delivered to support the beta release of the Person Manager Address Verification Service integration. This update addresses PE0004307 in the Ellucian Customer Center.

The `gurocfgi_082100.sql` DML script adds the `address.verify.integration.person.manager.clientId` and `address.verify.integration.person.manager.secret` configurations with a default value of *`UPDATE_ME`*.

The following DDL scripts add new table columns, `SPREMRG_REVIEWED_IND` and `SPREMRG_REVIEWED_USER`

© 2026 Ellucian Company LLC and its affiliates.

- `spremrg_082100_01.sql`
- `spremrg_082100_02.sql`
- `spremrg_082100_03.sql`

DDL script, `spraddr_082100_01.sql`, adds comments for the `SPRADDR_REVIEWED_IND` and`SPRADDR_REVIEWED_USER` columns.

Database updates to support new security APIs

Ellucian added a new Global Unique Identifier (GUID) column to the following tables to support Banner security APIs.

The following updated table scripts are associated with the security APIs delivered with the Banner Ethos API 9.3.35 September release.

Table	Script
GTVCLAS	• `gtvclas_082100_01.sql` • `gtvclas_082100_02.sql` • `gtvclas_082100_03.sql`
GTVSGRP	• `gtvsgrp_082100_01.sql` • `gtvsgrp_082100_02.sql` • `gtvsgrp_082100_03.sql`
GTVVPDI	• gtvvpdi_082100_01.sql • gtvvpdi_082100_02.sql • gtvvpdi_082100_03.sql
GUBROLE	• gubrole_082100_01.sql

© 2026 Ellucian Company LLC and its affiliates.

Table	Script
	• gubrole_082100_02.sql • gubrole_082100_03.sql

The following table scripts are in preparation for APIs that will be available with future releases of Banner Ethos API.

Table	Script
GTVFBPR	• gtvfbpr_082100_01.sql • gtvfbpr_082100_02.sql • gtvfbpr_082100_03.sql
GURUSRI	• `gurusri_082100_01.sql` • `gurusri_082100_02.sql` • `gurusri_082100_03.sql`
GURAOBJ	• `guraobj_082100_01.sql` • `guraobj_082100_02.sql` • `guraobj_082100_03.sql`

DML scripts for tables, GTVVPDI, GTVSGRP, GTVCLAS, GUBROLE, GURUSRI, GURAOBJ, and GTVFBPR:

- `ggjbpvali_082100.sql` - inserts tables as GURGUID job parameters.
- `ggurtrcki_082100.sql` - inserts tables for GURGUID processing

Triggers to populate the GUID column for each table:

© 2026 Ellucian Company LLC and its affiliates.

- `gt_gtvclas_guid_trg.sql`
- `gttsgrp0.sql`
- `gttvpdi0.sql`
- `gt_gubrole_guid_trg.sql`
- `gt_gtvfbpr_guid_trg.sql`
- `gt_gurusri_guid_trg.sql`
- `gt_guraobj_guid_trg.sql`

DBPROCs:

- `general_dbprocs_bansecr.sql`
- `general_dbprocs_general.sql`
- `gendbpr.sql`

Database support for GKAODFT page

This update addresses PE0004500 in the Ellucian Customer Center.

The updated GUKODFT (`gukodft1.sql`) package no longer checks if the user has write permissions to delete the file from the Oracle directory. The permissions are now inherited from the user's assigned roles.

Database support for future API Builder beta release

This update addresses PE0004645 in the Ellucian Customer Center

The following database updates support a future beta release of API Builder and has no impact on current Banner functionality.

- `gordbqc_082100_01.sql`
- `gordbqc_082100_02.sql`
- `gordbqc_082100_03.sql`
- `gordbqc_082100_04.sql`

© 2026 Ellucian Company LLC and its affiliates.

- `gordbqc_082100_05.sql`
- `gordbqc_082100_06.sql`
- `gordbqc_082100_07.sql`
- `gordbqc_082100_08.sql`

Release 9.3.31 and 8.20

Updated: June 20, 2024

The Banner General 9.3.31 and 8.20 releases contain enhancements, defect resolutions, and technical currency updates. The 8.20 release is a cumulative release of all interim releases and patches delivered after the 8.19 release.

COBOL process support has ended

Ellucian officially ended support for COBOL processes on November 30, 2023.

Ellucian no longer supports the following Banner General COBOL processes:

- GLBLSEL - Letter Extract (replaced by GLBLSELJ)
- GLOLETT - Parameter Selection Compile (replaced by GLOLETTJ)
- GLBDATA - Population Selection Extract (replaced by GLBDATAJ)
- GLBPARM - Parameter Selection Compile (replaced by GLBPARMJ)
- GUAVRFY - User ID/Password Verification (replaced by GUAVRFYJ)

As a reminder, Ellucian does not support customizations to these processes.

For more information about this change, see Knowledge base article 000051644 - Support of COBOL processes in Banner.

Person Manager address verification integration service (BETA)

This update addresses PE0003946 in the Ellucian Customer Center.

This release of Banner General supports the beta feature release of the Person Manager

© 2026 Ellucian Company LLC and its affiliates.

Address Verification Service. Institutions can use the Person Manager address verification service to verify addresses provided that they have configured Experience Foundation and Ellucian Person Manager. See Ellucian Person Manager configuration for details about configuring Ellucian Person Manager.

The Person Manager Address Verification Service leverages a common address verification service that uses API calls to interact with third-party providers rather than a direct point-to-point integration with an address verification provider. It provides address validation in real-time with the ability to store the verification status.

As of this beta feature release, Person Manager Address Verification Service supports Runner EDQ (CLEAN_Address), Initium, and Smarty.

For this beta feature release, Ellucian delivers Person Manager Address Verification Service support only within the address tab defined in the GOQCLIB common library. This means that only the pages listed below that inherit GOQCLIB address tab functionality have this feature support. Additional pages that support address verification will be available with future releases of the Banner Administrative pages.

- FTMAGCY
- FTMCUST
- FTMFMGR
- FTMVEND
- SAAQUIK
- SPAIDEN
- SRAQUIK

Before you can use Person Manager Address Verification Service, you must complete the following setup:

- Configure and enable the service on the Banner Applications Configurations (GUACONF) page under the new PERS_MGR application ID.
- Ensure that you do not already have a third-party address verification service enabled.
  If you have a third-party provider already configured that service will take precedence over the Person Manager Address Verification Service.

© 2026 Ellucian Company LLC and its affiliates.

Follow the steps below to configure and enable the Person Manager Address Verification Service.

1. Access the GUACONF page and enter `PERS_MGR` for the **Application ID**.
2. Select the **Configurations** tab.
3. Enter the appropriate values for the following configurations:

Configuration Name	Type	Value
address.verify.integration.person.manager.domain	string	Default value = *`UPDATE_ME`* Update this value with the domain name or IP address of the server that hosts Person Manager For example, `.prod.elluciancloud.com`
address.verify.integration.person.manager.enabled	string	Default value = N. Enable (Y) or disable (N) the Person Manager Address Verification Service.
address.verify.integration.person.manager.person.store.api	string	Default value = `https://person-store`
address.verify.integration.person.manager.tenantId	string	Default value = *`UPDATE_ME`* Update this value with the tenant ID of your institution to allow Person Manager Address Verification Service integration. For example, `yc671fc3-11fo-4df9-9d8b-c66da862a735`

© 2026 Ellucian Company LLC and its affiliates.

4. Manually insert the two configurations shown in the table below.

   Ellucian did not deliver these configurations with the initial beta version of Person Manager Address Verification Service. Ellucian will deliver DML for these two configurations with the Banner General 8.21 release in September 2024.

Configuration Name	Type	Value
address.verify.integration.person.manager.clientId	string	*`Client ID`* Enter the client ID used with the client secret for generating the OAuth request. For example, `z1_ytfhUAsDJ5rQfeaigT`
address.verify.integration.person.manager.secret	string	*`Client secret`* Enter the client secret used with client ID for generating the OAuth request For example, `ABCc6oL1nPNn0lZzi3-vlpCB99RFjWsDzG6lHzJzwD9Z5lPBxra9LbrnIFyYgHUteLGNC97V_Gl7P052-fooTs`

After you have configured and enabled Person Manager Address Verification Service, the pages that support this service display the following indicators:

- Search button next to the address fields. This indicates that Person Manager Address Verification Service is enabled. Click this button to open the **Address Suggestion** window to enter or edit an address.
- **Verified** or **Verify** button.
  - The **Verified** Verified button indicates the address is verified.
  - The **Verify** Verify button indicates the address is not verified.

© 2026 Ellucian Company LLC and its affiliates.

To use the address verification service to verify a new address or modify and existing address, follow the steps below:

1. Click **Search** to open the **Address Suggestion** pop-up window.
2. Enter or select a country in the **Country** field.
3. Enter an address in the **Address Line 1** field.

   As you type an address, the address verification service generates type-ahead suggestions that you can select from. The number of address suggestions defaults to ten as defined by Ellucian Person Manager.

4. Click **OK** after you complete all fields to invoke the address verification service.

   The page will display a message and the **Verify** Verify button will change to **Verified** Verified if the address verification service successfully verified the address.

See Person Manager address verification integration service database support for the associated database updates to support this feature.

To learn more about using and configuring address verification with Person Manager, see the following Ellucian Person Manager documentation located on the Ellucian Documentation site.

- Configure an address verification provider
- Address verification

Job submission batch process translation

This update addresses PE0002932 in the Ellucian Customer Center.

Ellucian is in the process of developing new functionality that will deliver translations to all Banner institutions and provide seamless translation of job submission batch output

Benefits of this new functionality include:

- Eliminates the need for separate translation releases
  - Reduces the number of upgrades the institution must complete
  - Enables faster consumption of Banner upgrades

© 2026 Ellucian Company LLC and its affiliates.

- Provides batch translation support for Banner SaaS

Ellucian will deliver this feature, which includes Banner batch framework enhancements and Banner product release enhancements, in two release phases. See the table below for a summary and link to the details included with each release phase.

Table 1: Release phases

Phase	Deliverable
Phase 1 - June 2024	New **Jobsubmission Language** field on the Installation Control Form (GUAINST) used to define the institution-level language and date format for all job submission output. You can set this value immediately which will set the database NLS variables.
Phase 2 - September 2024 After the completion of phase 2 in September 2024, Ellucian will enable the batch C framework and institutions can then leverage the benefits of this translation process.	• Batch C framework enabled • DML to support translation of batch C messages in addition to translated database (dbprocs) procedures, Menu, and Jobsub object descriptions.

After the institution sets the language/locale for all job submission output on the GUAINST page, the batch framework works seamlessly to deliver the translated output as described below.

- The Banner batch framework uses the value defined on GUAINST to select the language and set the environment locale and date format variables for the institution language and locale
- Batch C jobs set the database session parameters to the institution language and date format.
- All labels, headers, and titles used in batch C jobs select the translated message from the Banner NSLUSER schema tables if translation is available for the job and language.
- The Java batch job sets the database NLS session parameters to the institution language and date format for messages and dates sent from database procedure.

© 2026 Ellucian Company LLC and its affiliates.

- The Java batch submission job delivers the translated message bundle, if available, for the institution language.

Table 2: Supported languages for job submission batch translation

fr-FR	FRENCH	FRANCE

New Person Data Extract and Upload (GORPERX) process

This update addresses PE0003790 in the Ellucian Customer Center.

This process is intended for use only by the Ellucian Cloud team for data integration between Ellucian Person Manager and Banner.

The GORPERX process extracts Banner person data from a list of pre-configured tables specified on the **Crosswalk Rules (GTVSDAX)** page and generates CSV files which are then zipped and uploaded to an Amazon Simple Storage Service (AWS S3) bucket using a pre-signed URL.

The GORPERX process belongs to the BAN_ADMIN_C security class.

© 2026 Ellucian Company LLC and its affiliates.

For more details about the process, see Person Data Extract and Upload (GORPERX) process.

See DML scripts to support Person Data Extract and Upload (GORPERX) process for the database updates that support this enhancement.

DBMS_LDAP no longer supported for Banner 9 Self-Service authentication

This update addresses PD0013546 in the Ellucian Customer Center.

Ellucian no longer supports Lightweight Directory Access Protocol (DBMS_LDAP) for Banner 9 Self-Service authentication. If your institution uses DBMS_LDAP as your default Banner Self-Service 9 authentication process, this process will no longer function. This update does not impact existing directory services.

Ellucian recommends using SSO (CAS/SAML) for authentication with Banner 9 Self-Service.

Note: Banner 8 Self-Service still supports DBMS_LDAP authentication and will continue to work as it always has, however, you will need to use a SQL command line editor to manage settings.

To support this update, the **General User Preferences Maintenance Form (GUAUPRF) page** includes the following changes:

- **LDAP** tab removed
- **LDAP** option from **Tools** menu removed

To see details about the database updates that support this change, see DML to support the removal of the LDAP option.

About Banner (GUAABOT) page enhancement

This update addresses PE0004073 in the Ellucian Customer Center.

To ensure that the About Banner (GUAABOT) page displays the correct version information for Banner Administrative applications. Ellucian has enhanced the method in which the GUAABOT page retrieves and displays the Banner application version.

This method leverages a new configuration setting that Ellucian delivers already configured with the appropriate value for your Banner Administrative applications. For

© 2026 Ellucian Company LLC and its affiliates.

more details about this configuration, see *Version display on the About Banner (GUAABOT) page* in the Banner Admin Common 9.3.35 Release Notes on the Ellucian Documentation site.

Page changes to support Banner Finance

This update addresses PE0004044 in the Ellucian Customer Center.

Ellucian added the read-only **Account Payable Batch ID** field to the pages listed below. This field value represents a unique internal ID associated with an accounts payable payment batch. Banner adds the batch ID when processing accounts payable prenote activity and the **Direct Deposit Status** changes from **Prenote** to **Active**.

- Direct Deposit Recipient (GXADIRD) page
- Direct Deposit History (GXIDRDH) page

For a list of updated database objects to support the updated pages, see Database updates to support GXADIRD and GXIDRDH page enhancements.

For more information related to this enhancement, see the *Banner Finance 9.3.31 and 8.20 Release Notes* available on the Ellucian Documentation site.

Updated support files for future ICU 73.2 upgrade

This update addresses PE0003784 in the Ellucian Customer Center

Ellucian delivers the following updated files in `general_baseline/code/c`. These files lay the foundation for a future ICU 73.2 upgrade.

- `Makefile_tm`
- `guaorac2.pc`
- `gurdetl.pc`
- `sctproc.mk`
- `tmcilib.cpp`
- `tmcilib.h`

After you upgrade to Banner General 8.20, compiling Banner job submission PRO*C

© 2026 Ellucian Company LLC and its affiliates.

processes uses the `/usr/local/src/icu` file path.

Make sure that the ICU version source under `/usr/local/src/icu`, matches the installed version under `/usr/local/include` and `/usr/local/lib`. If the version does not match, update the `/usr/local/src/icu`.

Batch job submission release phases

Updated: June 20, 2024

Ellucian is delivering the job submission batch translation functionality in two phases. Review the details and delivery time frame of objects to support this enhancement.

Phase 1 - June 2024

Phase 1 - This release of Banner General 9.3.31 and 8.20 includes the following updates:

1. Batch C framework used to retrieve translated messages from the NLS tables.

   Note: This framework will not be enabled until the phase 2, September 2024 release.

2. The **Installation Control Form (GUAINST)** page includes a new **Jobsubmission Language** field used to select and set the institution language for all batch process output.

   This field is available to use immediately. When you set the locale/language using this field you are setting the language for all job submission output at the institution level.

Phase 1 - Database updates

Table 1: DDL - Defines the job submission institution locale

Script	Description
gubinst_082000_01.sql	Creates the new GUBINST_JOBSUB_NLS_LOCALE column to store the language value
gubinst_082000_02.sql	Inserts the table column comment
gubinsti_082000.sql	Inserts the default language value, 00-00 for American.

Table 2: Batch framework (C and Java) - sets environment variables

Object	Change and description
gurjobs.pc	Selects the GUBINST_JOBSUB_NLS_LOCALE and date format from JLOC2ORAX and exports locale, language,

© 2026 Ellucian Company LLC and its affiliates.

Object	Change and description
	and date variables to the job shell.
gjajobs.shl	Export variables and clear to reset new variables. • JOB_LANGUAGE • RUN_LOCALE • RUN_CODEPAGE • NLS_DATE_FORMAT

Table 3: Batch C framework - selects the translations from database

Object	Description
`guanlsl.h`	Header to define new procedures added to `guaorac2.pc`
`guaorac2.pc`	New procedures added to select the institution locale and date format and set the database NLS session variables. Add new procedures `TM_NLS_Get_DB` to select message from the database. • If the selected language is American, the batch C framework returns the messages defined in the batch C program and does perform the NLSUSER table lookup. • If the language is not American, and translations are available for the language, the message is selected from the NLSUSER table and returned to the calling program. The message is stored in array for reuse to avoid redundant selects.
`guaprpf.c`	Change `TM_NLS_Get` to

© 2026 Ellucian Company LLC and its affiliates.

Object	Description
	`TM_NLS_GET_NO_DB` for messages associated with obsolete RPT reports.
guarpfe.c	Change `TM_NLS_Get` to `TM_NLS_GET_NO_DB` for messages associated with obsolete RPT reports.
guastdf.cpp	Change `TM_NLS_Get` to `TM_NLS_GET_NO_DB` for month messages.
tmcilib.h	Header to define the redirect of `TM_NLS_Get` to new methods in `guaorac2.pc` which select message from database. Redirect to the new methods will not take affect until the Ellucian enables the framework in phase 2 (September 2024).

Table 4: Batch Java framework - sets the language and date NLS variables

Object	Description
`gurjbif.jar`	• Select locale and language from GUBINST and JLOC2ORA, and date format based on date format environment variable or JLOC2ORAX. • Set NLS session variables for database procedures

Phase 2 - September 2024

Phase 2 will include the following updates:

- Ellucian will enable the batch C framework.

  Note: During the upgrade, the batch C programs are recompiled which enables the framework to pull translated messages from the NLS database tables.

© 2026 Ellucian Company LLC and its affiliates.

- DML scripts to insert translated batch C messages, in addition to translated messages for Dbprocs, Menu, and *Jobsub* object descriptions delivered with each Banner product release.

After the phase 2 release, Banner will no longer require separate translation releases. More details will be provided with the phase 2 release.

Database updates

Updated: June 20, 2024

New and modified database objects to support enhancements included with the Banner General 8.20 release.

DML to support the removal of the LDAP option

The `gguroptmd_082000.sql` DML script removes the **LDAP** option from the **Tools** menu on the General User Preferences Maintenance (GUAUPRF) page.

This update addresses PD0013546 in the Ellucian Customer Center.

Person Manager address verification integration service database support

New scripts delivered to support the beta release of the Person Manager Address Verification Service integration. This update addresses PE0003946 in the Ellucian Customer Center.

DML scripts to support new Application ID and Person Manager API integration configurations:

- `gubappli_082000.sql`
- `gurocfgi_082000.sql`

DML scripts to support new column (SPRADDR_ADDR_EXT_VERIFIED_CDE) in the SPRADDR table used to indicate if the Person Manager address verification service successfully verified the address.

- `spraddr_082000_01.sql` - New column SPRADDR_ADDR_EXT_VERIFIED_CDE
- `spraddr_082000_02.sql` - Column comment

© 2026 Ellucian Company LLC and its affiliates.

DML scripts to support Person Data Extract and Upload (GORPERX) process

This update addresses PE0003790 in the Ellucian Customer Center.

DML scripts:

- `ggjbjobsi_082000.sql`
- `ggjbpdefi_082000.sql`
- `ggjbpdfti_082000.sql`
- `ggjrjbmoi_082000.sql`
- `ggobfeobi_082000.sql`
- `ggtvsdaxi_082000.sql`

Database updates to support GXADIRD and GXIDRDH page enhancements

The following database updates support the **Direct Deposit Recipient (GXADIRD)** and **Direct Deposit History (GXIDRDH)** page enhancements associated with PE0004044.

Changed tables:

- The GXRDIRD table includes a new column (GXRDIRD_AP_BATCH_ID) to store the unique internal ID associated with Accounts Payable payment batch.
- The GXRDRDH table includes a new column (GXRDRDH_AP_BATCH_ID) to store the unique internal ID associated with Accounts Payable payment batch.

`gxtdird0.sql` - New database trigger used to capture the GXRDIRD_AP_BATCH_ID.

To see all associated database objects delivered with this release, download the Banner General 8.20 Object List included with the supporting documentation compressed (zip) attachment for this release.

Updated script to support Banner Unified Auditing

The `gb_audit_maintenance1.sql` script is modified to improve reporting of successful audit operations to the Banner Security Violation Log (GURALOG) table.

This update addresses PE0003821 the Ellucian Customer Center.

Release 8.19.1

Updated: April 10, 2024

The Banner General 8.19.1 releases contain enhancements, defect resolutions, and technical currency updates.

COBOL process support has ended

Ellucian officially ended support for COBOL processes on November 30, 2023.

Ellucian no longer supports the following Banner General COBOL processes:

- GLBLSEL - Letter Extract (replaced by GLBLSELJ)
- GLOLETT - Parameter Selection Compile (replaced by GLOLETTJ)
- GLBDATA - Population Selection Extract (replaced by GLBDATAJ)
- GLBPARM - Parameter Selection Compile (replaced by GLBPARMJ)
- GUAVRFY - User ID/Password Verification (replaced by GUAVRFYJ)

As a reminder, Ellucian does not support customizations to these processes.

For more information about this change, see Knowledge base article 000051644 - Support of COBOL processes in Banner.

Banner Unified Auditing enhancements

- Optimized performance by reducing the number of database calls to set the audit context.
  This update addresses PE0003819 in the Ellucian Customer Center.

© 2026 Ellucian Company LLC and its affiliates.

- Audit records now capture the source application name and IP address.
  This update addresses PE0003820 in the Ellucian Customer Center.

Supporting documentation

To download supporting documentation for this release, click **Attachment** on this page and then select the associated compressed file (.zip) from the displayed list. The zip file contains the following files:

- Banner General Resolutions Report 8.19.1
- Banner General Release Notes 8.19.1
- Banner General readme 8.19.1
- Banner General Object List 8.19.1

The content published on the Documentation site for this release and the documentation included in the associated zip file (listed above) also support any associated hot fix releases.

Release 9.3.30 and 8.19

Updated: March 21, 2024

The Banner General 9.3.30 and 8.19 releases contain enhancements, defect resolutions, and technical currency updates. The 8.19 release is a cumulative release of all interim releases and patches delivered after the 8.18 release.

COBOL process support has ended

Ellucian officially ended support for COBOL processes on November 30, 2023.

Ellucian no longer supports the following Banner General COBOL processes:

- GLBLSEL - Letter Extract (replaced by GLBLSELJ)
- GLOLETT - Parameter Selection Compile (replaced by GLOLETTJ)
- GLBDATA - Population Selection Extract (replaced by GLBDATAJ)

© 2026 Ellucian Company LLC and its affiliates.

- GLBPARM - Parameter Selection Compile (replaced by GLBPARMJ)
- GUAVRFY - User ID/Password Verification (replaced by GUAVRFYJ)

As a reminder, Ellucian does not support customizations to these processes.

For more information about this change, see Knowledge base article 000051644 - Support of COBOL processes in Banner.

New GJRIROL process

This update addresses PE0003435 in the Ellucian Customer Center.

Ellucian introduces the initial version of the Alternate Role Maintenance (GJRIROL) Java batch process as an alternate solution to mitigate performance issues with the current Institution Role Maintenance (GURIROL) Pro C* process.

- Delivered in the BAN_GENERAL_C class
- GJRIROL currently does not replace the GURIROL process.
  GJRIROL and GURIROL both maintain institution role information in the GORIROL table, but there are differences in the way the process runs and the job parameters available, as described in the table that follows. Ellucian plans to reconcile these differences in a future release of GJRIROL.
- You can run either GJRIROL or GURIROL independently at any time, but as a best practice, Ellucian does not recommend running both processes concurrently.
  For example, if you run the GURIROL process first, it creates the roles in the GORIROL table according to the INTCOMP role group and the specified role. If you run GJRIROL after GURIROL completes, using the same role group and specified role, the process will not create any roles that GURIROL already created. The GJRIROL process only creates new roles if the role specified in the GORRSQL table returns individuals that are identified as deceased because the GJRIROL process does not restrict the creation of roles for deceased individuals as the GURIROL does.

Table 1: Differences between the GJRIROL and GURIROL processes

Difference	GJRIROL	GURIROL
Parameter values available	01 - 02	01 - 06
[1] Population selection	Currently not supported	Supports processing a population selection (Parameters 01 - 04)

© 2026 Ellucian Company LLC and its affiliates.

Difference	GJRIROL	GURIROL
[1] MEP	Currently must run the process for each institution in a MEPed environment.	Run the process one time for all institutions in a MEPed environment.
Role Group	No parameter available to select a role group. Processes only the INTCOMP role group by default.	Parameter 05 is available to select a role group, but GURIROL only processes the INTCOMP role group by default regardless of the selected role.
Role	Can process one or more roles (Parameter 01)	Can process only one role (Parameter 06)
[1] Roles processed	Currently only processes roles for individuals who are: • Identified as deceased or not deceased • Meet the criteria defined to create their role	Processes roles for individuals who are: • Defined as person entities • Not identified as deceased • Meet the criteria defined to create their role
Run Mode	Run in Audit (A) or Update (U) mode. The default value is A (audit). • Audit (A) - Review the results without updating the table • Update (U) - Process runs and performs table updates	Not available

See GJRIROL batch process support for a list of database updates associated with this enhancement.

© 2026 Ellucian Company LLC and its affiliates.

See Institution Role Maintenance (GJRIROL) process for more details about running the process.

New Banner Business Process APIs (BAPI)

This update addresses PE0003571 in the Ellucian Customer Center.

The following Banner Business Process APIs are available to query, insert, and update data for each tab on the Banner Applications Configurations (GUACONF) page.

- application-configurations
- application-page-configurations
- application-page-role-configurations
- self-service-rule-configurations
- self-service-parameter-configurations

See the *Banner API Catalog* on the Ellucian Documentation site site for more information about these APIs.

Baseline profile updates for Banner Unified Auditing

This update addresses PE0003272 and PE0003541 in the Ellucian Customer Center.

This release includes database updates to support the capture of IP address, HTTP session, and user application auditing information for Banner Unified Auditing.

See Baseline profile improvement support for the associated database changes.

For more information about the new Banner Unified Auditing functionality, see the *Banner Access Management 9.3.26 Release notes* available on the Ellucian Documentation site.

Texas Connection Consortium (TCC) database packages dropped from baseline

This update addresses PE0003338 in the Ellucian Customer Center.

See DBPROC script to drop TCC packages from baseline for additional details.

© 2026 Ellucian Company LLC and its affiliates.

Technical Currency

Ellucian strongly recommends customers always operate on software versions that we actively support and advises Banner users to promptly apply this upgrade as it addresses vulnerabilities in Ellucian code and third-party components. These updates address PE0003156 in the Ellucian Customer Center.

The Banner General 8.19 release removes extraneous xdc and xmlparserv2 dependencies to simplify maintenance of the Data Privacy Extract (GJRDPEX) process.

Supporting documentation

To download the content for this release, go to the Previous Versions page, navigate to the appropriate product, and then click the file associated with the version you need in the preferred language. All content is available in English (enus), and some content is available in Spanish (esmx) and French Canadian (frca).

Click the `Banner_General_9.3.30_8.19.0_enus_r29.zip` file to download content specific to theBanner General 9.3.30 release.

- Banner General Resolutions Report 8.19
- Banner General Resolutions Report 9.3.30
- Banner General Release Notes 9.3.30 and 8.19
- Banner General Installation Reference 9.3.30
- Banner General readme 8.19
- Banner General Object List 8.19
- Banner General Upgrade Guide 8.19
- Banner General Page List 9.3.30
- Banner General Get Started 9.3.30 and 8.19
- Banner General Configure 9.3.30 and 8.19
- Banner General Use 9.3.30 and 8.19

The content published on the Documentation site for this release and the documentation included in the associated zip file (listed above) also support any associated hot fix

Database updates

Updated: March 21, 2024

New and modified database objects included with the Banner General 8.19 release.

GJRIROL batch process support

The following DML scripts support the new Alternate Role Maintenance (GJRIROL) batch process. This update addresses PE0003435.

- `ggjbjobsi_081900.sql`
- `ggjbpdefi_081900.sql`
- `ggjbpdfti_081900.sql`
- `ggjbpvali_081900.sql`
- `ggjrjbmoi_081900.sql`
- `ggobfeobi_081900.sql`
- `ggubobjsi_081900.sql`
- `ggubobjsu_081900.sql`
- `gguraobji_081900.sql`
- `gguruobji_081900.sql`

Baseline profile improvement support

New `banproxy_grants_081900_01.sql` DML script grants execute privilege on GB_UNIFIED_AUDIT to BANPROXY.

New DBPROC scripts add new context processing for G$_AUDIT_IP_ADDR, G$_AUDIT_USER_APPLICATION, and G$_AUDIT_HTTP_SESSION:

- `gokb_unified_audit0.sql`
- `gokb_unified_audit1.sql`

© 2026 Ellucian Company LLC and its affiliates.

DBPROC script to drop TCC packages from baseline

The `gendbpr_baninst1_drop_081900.sql` script drops all TCC packages from the baseline database for non-TCC institutions except for GZKERRS.

Ellucian used the following criteria to ensure that the script deleted only TCC objects and that it did not delete institution created objects or non-TCC objects:

- Object has a Z as the second character
- Release number matches the specific delivered release number
- Code contains text specific to the TCC delivered DBPROC
- Institution is non-TCC client

As a best practice, Ellucian recommends verification following the installation of a release.
